Card Names

A card's subtypes are on its type line, which is the line below the card's name. English cards have a hyphen between type and subtypes. Non-English cards have a bullet between type and subtypes and bullets between subtypes.
If a card's text refers to a "Droid" or a "Jedi," it refers only to a card that has the word "Droid" or "Jedi" in its type line. If that word appears only in the card's name, it doesn't apply. For example, text that references Droids doesn't affect Droid Control Ship, because Droid Control Ship's type line is "Space - Trade Federation Capital Ship" (no "Droid").
Contesting Units

The rules for contested unique units are as follows:

If both players have a unique unit with the same name in battle at any time during the battle phase, the two units are contested.
When units are contested, players bid Force to win the contest. The bidding starts with the Dark Side player, who makes his or her first Force bid (of 0 or more). Then the Light Side player makes his or her first Force bid (of 0 or more). After that, bidding continues to alternate between the two players until neither player wants to raise his or her Force bid. Players can't bid more Force than they currently have.
When the bidding ends, each player adds his or her unit's total build cost and final Force bid. (Total build cost includes +1 for each card stacked under the unit.) The player with the higher total wins the bid. (The Dark Side wins ties.)
The winner of the contest pays Force equal to his or her final Force bid, and his or her unit stays in battle. The losing player pays no Force, and his or her unit retreats without tapping.
If there is more than one pair of contested units, the Dark Side player chooses which pair to bid on first.
Also note:

If you lose a contest for a unique unit, your unit retreats without tapping. You can put the unit back into its arena in your next build step. The unit will be contested again if your opponent's unit is still there.
If a unique unit is discarded, you can build and deploy another copy of that unit. (When a unit is discarded, it's not actually "dead" -- just out of the game.)
Unique unit cards refer to themselves by name. Unit cards that aren't unique use the phrase "this unit." But the card Nexu from the Attack of the Clones set was accidentally printed using its name, "Nexu," rather than "this unit." It is not unique, so its rules text should have used "this unit."
Turn Structure

Setup

If you run out of units to put into battle during setup, you have to stop. You can't put any more units into battle, but your opponent can still continue up to 30 build points, as usual.
None of your units' abilities work during setup. They start working at the start of the first turn.
During setup, you draw a card each time you put a unit card into battle, and when you partially build a unit card at the end of setup. During your build step, you don't draw a card for building or deploying units or building or completing Missions.
You can't do anything with Mission cards in your hand during setup. You can't even partially build one at the end of setup. You can only put unit cards into battle and partially build one unit card at the end of setup. Space, Ground, and Character cards are unit cards.
Ready Phase

In the ready phase, if it matters who untaps or gains Force first, the Dark Side player goes before the Light Side player.
"You gain +4 Force" means that you add 4 to your current Force total. It's a one-shot effect, so you add the 4 Force only once, when you play the card or ability

Command Phase

Building Units and Mission Cards

During your turn, you decide the order when it comes to: (1) resolving bounties you've earned, (2) paying your Upkeep costs, and (3) drawing your card; these are all triggered at the start of the build step.
You can partially build any number of unit and Mission cards during your build step, as long as you have enough build points to put at least 1 build counter on each of them. (Each time you start to build a unit or Mission card, you must spend at least 1 build point on it.)
Tapped units in your build zone may still be moved to their appropriate arena during the command phase.
During the command phase, if you complete a unit, you do not have to move it into the appropriate arena. Similarly, if you fully build (or overbuild) your last unit during setup, you are not forced to move it into the appropriate arena.

Retreating Units

You can't retreat tapped units during the retreat step. Only untapped units can retreat, because retreating in the retreat step taps the unit. But, if a card tells you to retreat a unit, it doesn't matter whether that unit's tapped or untapped. Retreating a unit due to a card or ability doesn't tap or untap the unit.

Battle Phase

An attack starts at the moment you choose a defending unit. It ends after all damage prevention and triggered abilities.
There's a play-or-pass chance before each attack. This is the time to play cards and abilities that increase a unit's speed.
If your opponent doesn't have any units in an arena, you still go through each of your units in speed order. This lets you to use Bombard, Ion Cannon, and "play only when this unit would attack" abilities.
If a unit that has already attacked becomes untapped during its battle step, it can attack again.
If an attack does 2 damage to a unit and you play a card that can prevent 5 damage, the card prevents only the 2 damage. The extra damage prevention is wasted.
Cards and abilities that do a number of dice of damage aren't attacks. Cards and abilities that affect attacks don't affect a card or ability that does a number of dice of damage.
"Until end of battle" means "until the end of this turn's battle phase." Effects that last until end of battle last until the battles in all 3 arenas are over.

End of Turn

Deal with all abilities that say "when the battle phase ends" at end of turn. You can't play Battle cards at end of turn, but you can still play activated abilities.

If you run out of cards in your deck, nothing special happens. Just keep playing with what you have.

Abilities

You can't use the abilities of partially built cards. You have to deploy a unit before using its abilities.

Effects are cumulative. If you have two effects that each give a unit +10 speed, that unit gets +20 speed. If you have two effects that each give a unit "Pay 1 Force Arrow Evade 1," that unit gets both abilities (and you can use each one once each time it's damaged).

Abilities and Battle Cards with Multiple Parts

If an ability or Battle card has multiple parts to its instructions, follow them in order.

If an ability or Battle card includes rolling dice or doing damage, chances for rerolling and preventing damage still happen--in the middle of the instructions on the ability or card. You don't follow all the instructions and then reroll dice and prevent damage.

Abilities that trigger while another card or ability is taking effect wait until it's finished taking effect. As usual, abilities that allow rerolls or prevent damage are special. They wait only until the next chance to prevent damage or reroll dice.

Triggered Abilities

Some triggered abilities set up effects that happen later. The Overload abilities in the Sith Rising set are an example of this.

A triggered ability triggers only if all its "when" and "if" conditions are true.

When a triggered ability triggers, it joins the pool of triggered abilities waiting to take effect. Once it's in the pool, it's certain to take effect, even if one or more of its conditions stop being true. For example, a unit card that says "When the battle phase starts, if this unit is in the Space arena . . ." triggers only if the unit is in the Space arena when the battle phase starts. The ability will still take effect even if an ability that triggered when the battle phase started caused it to be discarded.

If more than one triggered ability is waiting to take effect, deal with all the Dark Side's abilities, then all the Light Side's abilities. So if one or more of the waiting abilities are from Dark Side units, they all take effect before the Light Side's waiting abilities, in any order chosen by the Dark Side player. If none of the waiting abilities are from Dark Side units, the Light Side player's waiting abilities take effect.

"Held" Triggered Abilities

A triggered ability that's "held" is one that's waiting for a time when it can take effect. A triggered ability can't take effect while another card or ability is taking effect unless the triggered ability allows rerolls or prevents damage.

Triggered abilities that allow rerolls can take effect only during chances to reroll dice.

Triggered abilities that prevent damage can take effect only during chances to prevent damage.

No other triggered abilities can take effect during chances to reroll dice or prevent damage.

While the effects of an ability (even another triggered ability) or Battle card play out, all waiting triggered abilities are "held" until after the effects are complete.
During a chance to reroll dice or prevent damage, all waiting triggered abilities are "held" until after that chance passes. Any abilities that trigger during the chance join the abilities already waiting and are also "held."
"Held" triggered abilities simply wait until they're not held anymore (usually after the current chance to play activated abilities and Battle cards) and then take effect normally.
There are two exceptions to these rules:

Triggered abilities that allow rerolls aren't "held" during a chance to reroll dice (but are always held outside such a chance).
Triggered abilities that prevent damage aren't "held" during a chance to prevent damage (but are always held outside such a chance).
Activated Abilities
An activated ability is any ability on a unit with the arrow symbol (Arrow). It doesn't matter what the cost before the arrow symbol is—if it has an arrow symbol (Arrow), it's an activated ability. Battle cards also use the arrow symbol. This doesn't make them activated abilities, because only units (Space, Ground, and Character) can have activated abilities.

Activated abilities are separate from actual attacks. If a unit uses an ability that is played when it would attack, it is not considered to attack (unless the ability states that it is), and no abilities [triggered] off it attacking come into play. This also means that if you tap and zap, then you can't be Rebel Surrendered. However, you must choose what you are doing when you would attack, and can't change your mind later. (So if you were going to attack and were then hit you with a bunch of Gifts, you couldn't say, "Oh, then I want to use my ability.")
Keep in mind that the rules on activated abilities refer to abilities that increase power and other stats. It is not for abilities they use instead of attacks. This means that Han Enchained does allow the unit to still use abilities like "tap and zap Yoda"; it also means that a "tap and zap" would work against a unit that has Han Enchained on it.
Accuracy
Accuracy X (Add +X to each of this unit's attack dice.)

Accuracy makes a unit more likely to hit. Bonuses to your attack dice from Accuracy can't create "natural sixes" and increase the chance of doing extra damage with Critical Hit. (A "natural" six is one where one of the dice actually shows a six, before any bonuses or penalties.)
Armor

Armor does not stack.
Bounty

Q: When exactly do you earn the bounty?

A: At the start of the next turn's build step. So if both players earned a bounty last turn, the Dark Side player would get his or her bounty first.

Discard

Any time a card is discarded, that card must be discarded from your hand.
Disrupt

You can Disrupt your own Battle cards.
Intercept
Intercept (If a unit is attacking one of your units in the same arena as this unit, it now attacks this unit instead.)

You can play a unit's Intercept ability any time one of your other units in the same arena is attacked. If the attacking unit can't attack the unit with Intercept, though, you can't use its Intercept for that attack. You can still pay the Force, but the defending unit won't change.
Q: According to the rules on activated abilities, if you have two units with Intercept and Retaliate, each could use them once per opportunity to play them. Each unit would then have the opportunity to Intercept and Retaliate on one attack. To my knowledge, Intercept does not cause a new attack, it simply shifts the current attack to a different person. Is this right?

A: Yes, you can Intercept, use Retaliate, and then Intercept again.

Example: Units A and B have Intercept and Retaliate. Unit C is attacking.

Unit C attacks unit A who Retaliates. Then unit B Intercepts and Retaliates. This gives unit A the opportunity to Intercept and receive the damage, if so desired. Each ability is used once, since there is only one opportunity provided by the one attack. This wouldn't create a continuous loop, as there is only one attack to respond to; however, this would still be an effective way to do some extra damage (by spending a lot of Force).
Lucky

Q: When exactly do you reroll the dice?

A: Lucky is a keyword with a static effect. When a player (who owns a card in play with the Lucky effect) has a chance to play dice reroll abilities (for attack dice), that player can choose whether to use this static effect after all triggered reroll effects resolve.

Example: An AT-AT Assault Group piloted by General Maximilian Veers (A) attacks Anakin's Podracer (A). After the attack dice are rolled, the Assault Group's triggered reroll ability (granted by Veers) triggers and resolves, allowing the Dark Side player to reroll the dice. Then the normal "play or pass" chance occurs, when players can play effects that reroll dice. The Dark Side

player chooses first. When the Light Side player gets a chance to play or pass, the Light Side player can then use the Lucky ability from Anakin’s Podracer to reroll a die.

Other applicable effects or Battle cards (e.g., Shoot Her or Something, Second Effort, Cheat the Game) can also be played during the dice reroll play or pass sequence, either before or after Lucky is played. Lucky is simply one more dice reroll option that can be played. If both players pass in a row, the dice reroll chance ends, and any unused Lucky effects are lost for that attack.
Q: Does the dice reroll ability for Jar Jar Binks (A) resolve like the Lucky effect on Jar Jar Binks (B)

A: No. The Jar Jar (A) dice reroll ability is triggered, and it resolves with triggered effects. That triggered effect occurs before the chance to play dice reroll abilities and Battle cards.

Q: Suppose I have a power 2 unit with Lucky 2. If I roll one hit and one miss, do I need to reroll both dice? Can I just reroll 1?

A: You would have to reroll both dice.

Q: What if a Light Side unit with power 3 and Lucky 3 attacks a Dark Side unit with Lucky 2?

A: Each player has the opportunity to play Lucky effects during the dice reroll play or pass chance. The Dark Side player can use the Lucky 2 effect first, rerolling 2 dice; then the Light Side player can use Lucky 3, rerolling 3 dice.

As an alternative, Dark Side could pass and see what Light Side does. If Light Side plays Lucky 3 and rerolls, then Dark Side could respond with Lucky 2 and reroll two dice. If Light Side passes after Dark Side passes, however, the chance to play reroll effects ends, and neither Lucky effect can be played.

Q: Does Lucky stack? For example, Anakin Skywalker (J) gives a unit he pilots Lucky 2. If he pilots Anakin's Podracer (A), which already has Lucky 1, does the Podracer now have Lucky 3? And how does this work if the Podracer only has Power 2?

A: First of all, Lucky does stack (same as Accuracy).

As you show in your example, this means it's sometimes possible for units to gain a higher Lucky value than their Power. This works the same way as Jar Jar Binks (B)—when attacking, if your unit's Lucky is higher than its Power, you would reroll dice equal to its Power. Likewise, when defending and your opponent's unit has Power less than your unit's Lucky, you would reroll dice equal to your opponent's Power.

Overkill

The word "health" should be replaced with the words "remaining health."
Q: What happens if I apply Overkill to Hoth Battle Plains? If my Battle Droid Division rolls 4 hits, do I apply 8 damage to one unit, and then assign the remaining damage to another unit? Or do I apply 4 damage to one unit, and then double the remaining damage to another unit?

A: The damage is only doubled when it resolves; so, you would only get to apply 4 damage that will then be doubled if it resolves.

Overload
An "overload" ability lets you give a unit a bonus to its power when it attacks. Each time it attacks and uses this ability, it damages itself at the end of its attack: "When this unit attacks, you may give it +X power for that attack. If you do, when the attack ends, that unit does Y damage to itself."

The unit doesn't damage itself until the end of the attack.
You can prevent, evade, and deflect the damage, just like any other damage.
The power bonus lasts only until the attack ends.
If the unit attacks again, you can use the ability again. The unit gets the power bonus again, and it damages itself again at the end of that attack.
Pilots
{P} [Vehicle] Pilot. The [Vehicle] gets . . .

You can move your Characters with the Pilot ability onto your units in the Space or Ground arenas, giving those units bonuses to speed, power, or health or giving them extra abilities.
You can put a Pilot only on a unit that matches the type given after the Pilot symbol {P} and before the word "Pilot." You can put only 1 Pilot on any unit.
Example: You can't put a Starfighter Pilot on a Capital Ship or a Speeder; a Starfighter Pilot goes only on a Starfighter.
You can't put a Pilot on any unit that has the Droid subtype, though. (There's no room for a Pilot on a Droid ship).
Each Pilot also gives one or more bonuses or abilities to the unit. These are listed after or below "Pilot." None of the abilities after or below "Pilot" work if the Pilot is in the Character arena.
Example: A Starfighter Pilot gives his Starfighter +20 speed and "Pay 1 Force Arrow Evade 2." If the Pilot is in the Character arena, he doesn't get any extra speed, and he can't use that Evade ability.
Some cards or abilities can tell you to move either the Pilot or the piloted unit to a different arena or zone.
If the Pilot is moved, the unit stays where it is (even if the Pilot is discarded).
If the unit moves, the Pilot moves with it (including when the unit is discarded, returned to your hand, or moved to the build zone).
Pilots During Setup
You can't put Pilots on units during setup. You must put them into the Character arena. You can move them onto units during your build step.

Pilots During the Ready Phase
If a Pilot on a unit is tapped, the Pilot untaps normally during the ready phase.
Pilots During the Build Step
During your build step, you can move each of your Pilots once.
If you move a Pilot onto a unit, move the Pilot from the build zone or from the Character arena onto one of your units in the Space or Ground arenas.
If you move a Pilot from one unit to another, just make sure the other unit is the right type for the Pilot. That unit can be in any arena or in the build zone.
If you move a Pilot off of a unit, move it from the unit to the Character arena or build zone.
Pilots During the Retreat Step
To retreat a unit with a Pilot on it, you must have both the unit and the Pilot untapped. Tap both the unit and the Pilot. You can also retreat the Pilot without retreating the unit.
Piloting Units
As long as a Pilot is on a unit in the Space or Ground arena, the Pilot isn't a unit. The Pilot is just part of the Space or Ground unit. The Pilot is still a Character and still has any subtypes (Bounty Hunter, Jedi, and so on).
The Pilot can't be attacked. Only the unit can be attacked.
Any card or ability that says it affects units doesn't affect Pilots on units. Cards and abilities that say "a Pilot," "a Jedi," or "a Character" without using the word "unit" can affect such Pilots.
A Pilot's speed and power don't matter while the Pilot is on a unit.
The health of a Pilot on a unit can matter. If the Pilot is damaged, the Pilot still has damage counters. If the Pilot has more damage counters than health, you still discard the card. This doesn't affect the Space or Ground unit, except that unit loses any abilities or bonuses the Pilot gave it.
Damage on the Pilot doesn't count against the unit's health, and vice versa.
You can use any of the Pilot's normal abilities that still apply. Most of them, like "Pay 1 Force Arrow This unit gets +2 power for this attack" don't apply, because a Pilot on a unit isn't a unit.
Unique Pilots
Some Pilots are unique and have more than one version. If a Pilot with a stack is on a unit, the unit doesn't get any extra bonuses from the Pilot, just the normal ones in the Pilot's text box.
You can move such a Pilot when you rearrange the stack. You may have to move the Pilot if the card you want to put on top can't be put on the Pilot's current unit.
Example: You have Luke Skywalker with the "Starfighter Pilot" ability stacked on top of Luke Skywalker with the "Speeder Pilot" ability. Luke is on a Starfighter. If you wanted to bring Speeder Pilot Luke to the top of the stack, you would have to move him to a Speeder, to the Character arena, or to the build zone.
Retaliate
Retaliate X (If a unit in the same arena as this unit is attacking this unit, this unit does X dice of damage to that unit when the attack ends.)

Retaliate allows your units to strike back at their attackers. Most units with the Retaliate ability require you to pay a Force cost to activate the Retaliate ability. You may use the Retaliate ability even if your unit takes enough damage to destroy it.

Example: Darth Vader attacks your Luke Skywalker (F), who has "Pay 1 Force Arrow Retaliate 2." Vader does enough damage to cause Luke to be discarded. You may still play the Retaliate ability to make Luke's dying strike against his attacker.
Stun
Stun X (When this unit damages another unit, that unit gets -X power until end of battle.)

If all the damage is prevented, Stun doesn't kick in.
Stun works any time the unit damages another unit, not just if the damage is from an attack.
If a unit attacks another unit that has Stun and Deflect (and the second unit deflects the damage), the unit that the damage is Deflected to loses power because of Stun (because the deflected damage was done by the unit with Stun and Deflect).
If a unit with Stun attacks another unit that has Deflect, but not Stun (and the second unit deflects the damage), the unit that the damage is Deflected to doesn't lose any power because of Stun (because the deflected damage was done by a unit that doesn't have Stun).
Upkeep

As a general rule, if you can pay Upkeep, you must pay Upkeep.
You must still pay the Upkeep costs of a unit even if that unit retreats, becomes part of a stack, or pilots another unit.
Q: Can I try to pay Upkeep before earning the bounty?

A: Yes, since these are both triggered abilities that trigger at the start of your build step, you can chose to deal with the Upkeep ability first, and then deal with the bounty.

Errata

There are currently no new errata to any *Star Wars* trading card game cards.

Rulings

General Rulings

-
- "Until end of battle" means "until the end of this turn's battle phase." Effects that last until end of battle last until the battles in all 3 arenas are over.
- An attack starts at the moment you choose a defending unit. It ends after all damage prevention and triggered abilities.
- You can't use the abilities of partially built cards. You have to deploy a unit before using its abilities.
- Cards and abilities that do a number of dice of damage aren't attacks. Cards and abilities that affect attacks don't affect a card or ability that does a number of dice of damage.
- An activated ability is any ability on a unit with the arrow symbol. It doesn't matter what the cost before the arrow symbol is--if it has an arrow symbol, it's an activated ability. Battle cards also use the arrow symbol. This doesn't make them activated abilities, because only units (Space, Ground, and Character) can have activated abilities.
- "You gain +4 Force" means that you add 4 to your current Force total. It's a one-shot effect, so you add the 4 Force only once, when you play the card or ability

Unique unit cards refer to themselves by name. Unit cards that aren't unique use the phrase "this unit." But the card Nexu from the *Attack of the Clones* set was accidentally printed using its name, "Nexu," rather than "this unit." It is not unique, so its rules text should have used "this unit."

Abilities and Battle Cards with Multiple Parts

-
- If an ability or Battle card has multiple parts to its instructions, follow them in order.
- If an ability or Battle card includes rolling dice or doing damage, chances for rerolling and preventing damage still happen--in the middle of the instructions on the ability or card. You don't follow all the instructions and then reroll dice and prevent damage.

Abilities that trigger while another card or ability is taking effect wait until it's finished taking effect. As usual, abilities that allow rerolls or prevent damage are special. They wait only until the next chance to prevent damage or reroll dice.

Triggered Abilities

Normally, you won't need to worry about any of these rulings. The situations that they cover won't come up in most games.

Triggered Abilities in General

-
- Some triggered abilities set up effects that happen later. The "overload" abilities in the *Sith Rising* set are an example of this.
- A triggered ability triggers only if all its "when" and "if" conditions are true.
- When a triggered ability triggers, it joins the pool of triggered abilities waiting to take effect. Once it's in the pool, it's certain to take effect, even if one or more of its conditions stop being true. For example, a unit card that says "When the battle phase starts, if this unit is in the Space arena . . ." triggers only if the unit is in the Space arena when the battle phase starts. The ability will still take effect even if an ability that triggered when the battle phase started caused it to be discarded.

If more than one triggered ability is waiting to take effect, deal with all the Dark Side's abilities, then all the Light Side's abilities. So if one or more of the waiting abilities are from Dark Side units, they all take effect before the Light Side's waiting abilities, in any order chosen by the Dark Side player. If none of the waiting abilities are from Dark Side units, the Light Side player's waiting abilities take effect.

"Held" Triggered Abilities

A triggered ability that's "held" is one that's waiting for a time when it can take effect. A triggered ability can't take effect while another card or ability is taking effect unless the triggered ability allows rerolls or prevents damage.

-
- Triggered abilities that allow rerolls can take effect only during chances to reroll dice.
- Triggered abilities that prevent damage can take effect only during chances to prevent damage.
- No other triggered abilities can take effect during chances to reroll dice or prevent damage.
- While the effects of an ability (even another triggered ability) or Battle card play out, all waiting triggered abilities are "held" until after the effects are complete.
- During a chance to reroll dice or prevent damage, all waiting triggered abilities are "held" until after that chance passes. Any abilities that trigger during the chance join the abilities already waiting and are also "held."
- There are two exceptions to these rules: (1) Triggered abilities that allow rerolls aren't "held" during a chance to reroll dice (but are always held outside such a chance). (2)

Triggered abilities that prevent damage aren't "held" during a chance to prevent damage (but are always held outside such a chance).

"Held" triggered abilities simply wait until they're not held anymore (usually after the current chance to play activated abilities and Battle cards) and then take effect normally.

Clarified Rules for Contested Unique Units

The rules for contested unique units in the Attack of the Clones and *A New Hope*rulebooks aren't completely clear and don't cover certain possibilities. So we've rewritten them. The new, improved rules for contested unique units are as follows:

If both players have a unique unit with the same name in battle at any time during the battle phase, the two units are contested.

When units are contested, players bid Force to win the contest. The bidding starts with the Dark Side player, who makes his or her first Force bid (of 0 or more). Then the Light Side player makes his or her first Force bid (of 0 or more). After that, bidding continues to alternate between the two players until neither player wants to raise his or her Force bid. Players can't bid more Force than they currently have.

When the bidding ends, each player adds his or her unit's total build cost and final Force bid. (Total build cost includes +1 for each card stacked under the unit.) The player with the higher total wins the bid. (The Dark Side wins ties.)

The winner of the contest pays Force equal to his or her final Force bid, and his or her unit stays in battle. The losing player pays no Force, and his or her unit retreats without tapping.

If there is more than one pair of contested units, the Dark Side player chooses which pair to bid on first.

Activated Abilities

Activated abilities are separate from actual attacks. If a unit uses an ability that is played when it would attack, it is not considered to attack (unless the ability states that it is), and no abilities [triggered] off it attacking come into play. This also means that if you tap and zap, then you can’t be Rebel Surrendered. However, you must choose what you are doing when you would attack, and can’t change your mind later. (So if you were going to attack and were then hit you with a bunch of Gifts, you couldn’t say, “Oh, then I want to use my ability.”)

Keep in mind that the rules on activated abilities refer to abilities that increase power and other stats. It is not for abilities they use instead of attacks.

This means that Han Enchained does allow the unit to still use abilities like “tap and zap Yoda”; it also means that a "tap and zap" would work against a unit that has Han Enchained on it.

Questions

Q: How does it work when a card (such as Asteroid Field) causes damage against all units in an arena? Do you roll against each unit and hold all damage (and therefore damage prevention “play or passes”) until all units have been rolled against? Or do you roll against each unit separately, dealing with damage on one before moving on to the next; and if so, who decides the order?

A: All of the dice are rolled, and then there is one total “play or pass” damage prevention, not one for each unit. The controller of the card that forced the roll is the one who chooses the order of the units.

Q: How does the Vader’s Call Mission card work?

A: You may pay any amount of Force up to X (X = the number of build counters on Vader’s Call). Your opponent discards this many cards.

Q: According to the rules on activated abilities, if you have two units with Intercept and Ret aliate, each could use them once per opportunity to play them. Each unit would then have the opportunity to Intercept and Retaliate on one attack. To my knowledge, Intercept does not cause a new attack, it simply shifts the current attack to a different person. Is this right?

A: Yes, you can Intercept, use Retaliate, and then Intercept again.

For example:

Units A and B have Intercept and Retaliate. Unit C is attacking.

Unit C attacks unit A who Retaliates. Then unit B Intercepts and Retaliates. This gives unit A the opportunity to Intercept and receive the damage, if so desired. Each ability is used once, since there is only one opportunity provided by the one attack. This wouldn’t create a continuous loop, as there is only one attack to respond to; however, this would still be an effective way to do some extra damage (by spending a lot of Force).

Q: Can Darth Vader (A) cause Obi's Spirit to retreat from the Character arena? If you play Hope of Another on a Character, can Darth Vader (A) cause that Character retreat?

A: Yes. You must be a Jedi Master to avoid the effects.

Q: Can Darth Vader (G) tap to disrupt a Battle card even if no Battle card has been played? Can he tap to disrupt your own Battle card?

A: Your Darth Vader (G) can't disrupt a Battle card that hasn't been played, but can disrupt one of your own Battle cards.

Q: What happens if you have *Bright Hope* with a Ground card under it, then play Refit on Yavin on the *Bright Hope*?

A: The card stays removed and has no effect afterward.

Q: What happens if I apply Overkill to Hoth Battle Plains? If my Battle Droid Division rolls 4 hits, do I apply 8 damage to one unit, and then assign the remaining damage to another unit? Or do I apply 4 damage to one unit, and then double the remaining damage to another unit?

A: The damage is only doubled when it resolves; so, you would only get to apply 4 damage that will then be doubled if it resolves.

Q: Cloud City Landing Platform says: "When the roll for build points is made, you may reroll it once." I also have a unit with an ability that begins "When the roll for build points is made . . ." Can I then use this ability twice in a single turn by using the Cloud City Landing Platform to reroll the build roll?

A: You only get the effects off the final roll for build points.

Q: When you play Self Destruct on a unit does its Retaliate cost anything?

A: No.

Q: I have a Jawa Sandcrawler and Forward Command Center in play. When it's my turn to attack, do I have to tap the Forward Command Center when its speed 20 is checked and thus I can't use his ability to increase the power of my Jawa Sandcrawler? (Can Forward Command Center use its ability on units that are slower than it is?)

A: You could not use the Forward Command on the Jawa Sandcrawler, because you play it when that unit (the one whose power you want to increase) would attack. Since the Forward Command Center would be tapped before that, it doesn't work.

Q: Two Location cards, Asteroid Field and Hoth Icefields, damage units in the Space and Ground arena respectively. Is the following the correct approach of resolving the damage: Damage is rolled against each unit, and the pending damage on each unit is noted. Once all damage rolls are complete, all the damage is resolved in one damage "play or pass"?

A: All dice are rolled in the order the controller of the card chooses. Then both sides get damage prevention for ALL cards at once. They aren't resolved separately.

Errata and Rulings: *Attack of the Clones*

Errata

- Darth Sidious (A): The second paragraph should read: "As long as Sidious is in the Character arena, your opponent builds all cards face up." (It was printed incorrectly with "builds all units face up.") The printed wording let players mislead their opponents about the type of cards they were building. The new wording now affects both unit and Mission cards.

Rulings

Attract Enemy Fire

-

If you have a unit that can't be attacked (because of Tyranus's Edict or a similar card), there's no way to attack it at all. If you play Attract Enemy Fire, you can't change the defending unit to a unit that can't be attacked.

Clone Officer

-

The Clone Officer says "each of your Clones get +1 power." Its subtype includes "Clone," so its ability will give itself +1 power in addition to giving each of your other Clones +1 power.

Dark Side's Command and Dark Side's Compulsion

-
- Playing one of these two cards during an attack doesn't cancel that attack. It just lets you attack with one of your opponent's units.

If you choose to use the effect, then you get to make all the choices about which of your opponent's units is attacked. Your opponent can't choose not to attack and can't play an ability. If you choose not to use the effect, or if you can't use it because none of your opponent's units can be attacked, the unit attacks normally. In that case, your opponent gets to make all the choices, just like a normal attack.

Jango Fett (C) (Hasbro action figure card)

-

There's a typo in this card's rules text. The word "attacking" was printed without the letter (C).

Obi-Wan Kenobi (B)

-

You can use the "Pay 1 Force ⟶ Prevent 1 damage to Anakin Skywalker" ability even when Obi-Wan has retreated to the build zone.

War Will Follow

-
- You can't ever deploy a partially built card. You can deploy only units that have been retreated.

This card uses the term "build area," where it should have used "build zone." The two terms mean the same thing, but future cards will always use "build zone," not "build area."

Errata and Rulings: *Sith Rising*

Errata

There are currently no errata to any *Sith Rising* cards.

Rulings

Aurra Sing (A)

Treat Aurra as a Dark Jedi.

When Aurra damages a Jedi and that Jedi is discarded, untap Aurra. *(She can attack again.)*

-
- Any card that looks for a Jedi or Dark Jedi will see Aurra Sing as a Jedi, even though she doesn't have the word "Jedi" on her type line. This is true even if her card is in your deck, hand, or discard pile.

Any time Aurra damages a Jedi, if that damage causes the Jedi to be discarded, you must untap Aurra. (She untaps every time she kills a Jedi.) You don't untap her if she damages a Jedi and that Jedi isn't discarded immediately, but is then discarded later on in the turn.

Careful Targeting

Pay 1 Force ⟶ Choose a unit with Shields. Until end of battle, that unit's Shields don't work.

-
- Completely ignore the unit's Shields ability.

All Shields abilities on the unit stop working, whether they're printed on it or it gets them some other way.

Clone Captain

Put any number of damage counters on one of your other Clones in any arena ⟶ Prevent that much damage to this unit.

-

- You can't split the damage from an attack among more than one of your Clones. You can play this ability only once each time a source would damage Clone Captain.

You can't prevent damage to those Clones in any other way, either. You're putting damage counters on them, not doing damage to them.

Concentrated Fire

When the battle phase starts, choose one of your opponent's units in the Space arena. Concentrated Fire does 4 dice of damage to that unit.

-
- You don't choose the unit until the battle phase starts, so your opponent can't stop you from doing so unless he or she retreats all his or her units from the Space arena.

If your opponent retreats all his or her units from the Space arena, Concentrated Fire does nothing.

Darth Maul (C)

Pay 3 Force ⟶ Your opponent can't use Evade to prevent damage from Maul for this attack.

Pay 3 Force ⟶ Evade 1 *(Prevent 1 damage to Maul.)*

-

Your opponent can still use Battle cards and other abilities that prevent damage. Maul's first ability stops your opponent only from playing the Evade keyword ability to prevent any damage from Maul during this attack.

Darth Sidious (B)

Pay 4 Force, discard one of your other Characters from the Character arena ⟶ You get a number of build points equal to that Character's total build cost. Play only during your build step.

-

For a normal unit, the "total build cost" is just the unit's build cost. For a stacked unit, the "total build cost" is the build cost of the top card of the stack, plus 1 for each card under that card.

Darth Tyranus (D)

, Pay 2 Force ⟶ Choose one of your opponent's units in the Character arena. Tyranus does 4 damage to that Character. Your opponent can't use Evade to prevent that damage unless that Character is a Jedi Master. Play only when Tyranus would attack.

Pay 3 Force ⟶ Evade 3 *(Prevent up to 3 damage to Tyranus.)*

-
- Tyranus's first ability isn't an attack.
- For Tyranus's first ability, you don't roll dice. The ability always does 4 damage to the Character you choose.

With Tyranus's first ability, your opponent can play Battle cards and other abilities to prevent the damage, even if the Character you choose isn't a Jedi Master.

Fog of War

For each unit in the Space, Ground, and Character arenas *(yours and your opponent's),*roll one of your dice. If you roll 5 or 6 for a unit, tap it.

-

You roll one of your dice for each unit, so some units could be tapped and others left untapped.

Jedi Starfighter Wing

This unit gets +4 power as long as there are no damage counters on it.

-

If this unit gets any damage counters, it loses its power bonus.

Jocasta Nu (A)

As long as Jocasta is in the Character arena, draw 2 extra cards during your draw step and then put 2 cards from your hand on the bottom of your deck.

Pay 1 Force ⟶ Evade 2 *(Prevent up to 2 damage to Jocasta.)*

-
- If Jocasta is in the Character arena when you draw your card in the draw step, you get to draw 3 cards and then put any 2 cards from your hand on the bottom of your deck.

Jocasta doesn't affect card drawing at any time other than the draw step.

Naboo Starfighter Wing

This unit gets +3 power as long as there are no damage counters on it.

-

If this unit gets any damage counters, it loses its power bonus.

Padmé Amidala (E)

As long as Padmé is in the Character arena, each Light Character costs 1 fewer build counter to deploy.

-

If you can deploy a unit for 0 build counters, you don't have to put a build counter on it when you start to build it. If you do this, you must deploy it as soon as you can.

Republic Drop Ship

When you deploy this unit, you get +2 build points this turn.

-
- If you put the Republic Drop Ship into an arena during setup, you don't get the +2 build points.

If you partially build the Republic Drop Ship at the end of setup, you get the +2 build points when you deploy it.

Run the Gauntlet

When the battle phase starts, choose one of your opponent's units in the Ground arena. Run the Gauntlet does 6 dice of damage to that unit. Your opponent gains +2 Force.

-

Your opponent gets the +2 Force after the damage has been done. So he or she can't use that Force to reroll any of the dice or prevent any of the damage.

Senatorial Cruiser

When you deploy this unit, you may return a Starfighter card from your discard pile to your hand. Shields 1 *(Each unit gets -1 power as long as it's attacking this unit.)*

-
- If you put the Senatorial Cruiser into an arena during Setup, you don't return a Starfighter card to your hand.

If you partially build the Senatorial Cruiser at the end of setup, you may return a Starfighter card to your hand when you deploy it.

Sith Infiltrator (A)

When Sith Infiltrator is discarded from the Space arena, you may pay 2 Force. If you do, return it from your discard pile to your hand.

-

You have to pay the 2 Force as soon as the Sith Infiltrator is discarded from the Space arena. You can't wait and pay it later in the turn or during a later turn.

Suppressing Fire

Pay 2 Force ⟶ One of your units using Bombard to attack a Ground unit gets +4 power for this attack.

-

If you choose to use a Bombard ability of one of your units, and that unit is still attacking a Ground unit, then you can play Suppressing Fire to give it +4 power.

Twilight of the Republic

After you complete Twilight of the Republic, your build step ends and the Light Side build step starts. After the Light Side build step, you get another build step using your remaining build points.

Also, the Light Side retreat step happens before the Dark Side retreat step this turn.

-
- Twilight of the Republic swaps the order of the build and retreat steps this turn, forcing the Light Side player to build, deploy, and retreat before the Dark Side player does.

You don't get any extra build points during your second build step. You just get however many build points you had left when you completed Twilight of the Republic.

Yoda (C)

, 2 Force pay ⟶ An opponent's unit you choose. In the Character arena it must be. To that Character 4 damage Yoda does. To prevent that damage your opponent Evade cannot use, unless that Character a Jedi Master or Sith Master is. Only when Yoda would attack play.

2 Force pay ⟶ Evade 3 *(Up to 3 damage to Yoda prevent.)*

-
- Yoda's first ability isn't an attack.
- For Yoda's first ability, you don't roll dice. The ability always does 4 damage to the Character you choose.

With Yoda's first ability, your opponent can play Battle cards and other abilities to prevent the damage, even if the Character you choose isn't a Jedi Master or Sith Master.

Errata and Rulings: *A New Hope*

Errata

There are currently no errata to any *A New Hope* cards.

Rulings

Admiral Motti (A)

Anytime a Jedi Character can attack Motti, that Character must do so. As long as Motti is in the Character arena, your Jedi Characters can attack Motti.

- Your Jedi Characters must attack Motti if they can.
- Your opponent's Jedi Characters must attack Motti if they can.

Blaster Barrage

Pay 5 Force ⟶ For this attack, you may divide the damage done by the attacking unit between the defending unit and another of your opponent's units in the same arena as the defending unit. Play only when one of your units is attacking *(before you roll attack dice).*

- You must play Blaster Barrage before dice are rolled. When you play it, choose the unit that you plan to damage in addition to the defending unit. Once the dice have been rolled (and rerolled), you can divide the damage up between the defending unit and the other unit.
- You can choose to do 0 damage to either of the two units.

Contingency Plan

Remove all build counters from each partially built card in your build zone. You get that many extra build points this turn.

- The units from which you remove the build counters are still considered "partially built," even though they have no build counters on them.

- You can spend the build points you get in any way you choose.

Dannik Jerriko (A)

Stun 3 *(When Dannik damages another unit, that unit gets -3 power until end of turn.)*When Dannik damages a Character, remove 1 damage counter from Dannik.

- Remove 1 damage counter each time Dannik damages a Character.
- You can't remove more than 1 damage counter each time Dannik damages a Character, even if he does 2 or more damage.

Darth Vader (A)

When Vader attacks a Character other than a Jedi Knight or Jedi Master, you may pay Force equal to that Character's total build cost. If you do, that Character retreats when Vader's attack ends. Pay 2 Force ⟶ Evade 2 *(Prevent up to 2 damage to Vader.)*

Pay 1 Force ⟶ Intercept *(If a unit is attacking one of your Characters in the same arena as Vader, it now attacks Vader instead.)*

- You must pay the Force for Vader's first ability when he attacks. If you pay the Force, the unit will retreat after the attack (if it's still in the Character arena). If Vader attacks a Jedi Knight or Jedi Master, the ability does nothing--you can't even pay the Force.
- The "total build cost" of a stack is the build cost of the top card, plus one for each card stacked underneath it.

  Q: Can Darth Vader (A) cause Obi's Spirit to retreat from the Character arena? If you play Hope of Another on a Character, can Darth Vader (A) cause that Character retreat?

  A: Yes. You must be a Jedi Master to avoid the effects.

Demonstration of Power

Each of your Dark Side units that currently has power 5 or more gets +3 power until end of turn.

- This card cares about the power of your Dark Side units only at the time you play it. If those units' power changes later in the turn, its effect on them doesn't change.

Desperate Confrontation

Each of your units gets "Pay 1 Force ⟶ This unit gets +2 power for this attack" until end of turn.

- Each unit can use the ability once per attack.

Dianoga (A)

↻ → Choose an untapped Character with power 4 or less. Tap that Character. Play only during battle.

- "Play only during battle" means that you can play the ability at any time you could normally play a Battle card. You don't have to wait until Dianoga attacks.

Elite Stormtrooper Squad

Critical Hit 1 *(This unit does 1 more damage if you roll at least one natural six.)*

Accuracy 1 *(Add +1 to each of this unit's attack dice.)*

- Accuracy doesn't help you get a Critical Hit--you still have to roll a natural six.

Imperial Blockade

Mission

To complete Imperial Blockade, you must also pay 8 Force.

Your opponent can't spend build points this turn.

- Any unspent build points are lost. They don't carry over from turn to turn.

Imperial Manipulation

When the battle phase starts, move 1 damage counter from one unit to another unit in the same arena. *(This can't be prevented.)*

- Moving damage counters isn't the same as doing damage. You just take a damage counter and put it onto a different unit.
- You can move the damage counter onto one of your opponent's units or from one of your opponent's units to another of his or her units.

It's Not Over Yet

Pay 5 Force → Choose an arena. Untap all units in that arena. Fight another battle in that arena. Play only if all units in all arenas are tapped.

- "Fight another battle in that arena" means that you take another battle step for that arena.
- The units in that arena get to attack again.
- Anything that triggers at the start of the appropriate battle step will trigger.

Jump to Lightspeed

Return one of your units from the Space arena to your hand. *(Also return all cards stacked with it and its Pilot, if any, to your hand.)*

- You can play this card even if the unit you want to return is being attacked.
- You can't play this card after dice have been rolled, because it doesn't allow you to reroll dice or prevent damage. (Those are the only things you can do after dice have been rolled.)

Luke Skywalker (A)

⟳ → Search your deck. You may take a Luke Skywalker card from your deck. Show it to your opponent and put it into your hand. Then shuffle your deck. Play only during your build step.

- You can take any card named Luke Skywalker. You can't take a card with any other name, like Luke's X-wing.
- You can get any version of Luke Skywalker, even another Luke Skywalker A.

Luke's Speeder (A)

Discard Luke's Speeder from the Ground arena → Show one of your partially built Space unit cards to your opponent. Put 3 build counters on it. Play only during your build step.

- This unit lets you put free build counters on one of your partially built Space unit cards. (These build counters don't cost you any build points.)

Mounted Stormtrooper

Discard this unit from the Ground arena → Show one of your partially built Stormtrooper Character cards to your opponent. Put 2 build counters on it. Play only during your build step.

- This unit lets you put free build counters on one of your partially built Stormtrooper Character cards. (These build counters don't cost you any build points.)

Owen Lars (A)

Discard Owen from the Character arena → Choose one of your Characters. That Character can't be attacked this turn. Play only during your build step.

- The Character can still be affected by cards and abilities.

Penetrate the Shields

One of your units gets +3 power for this attack if it's attacking a unit with Shields.

- Check to see if the defending unit has Shields only at the time you play this card. If the defending unit loses Shields or if a unit without Shields becomes the defending unit, your unit keeps the +3 power.

Rebel Blockade Runner

↻ → Draw a card. Play only during your build step.

When one of your opponent's effects causes you to discard this card from your hand, you may put it into the Space arena from your discard pile.

- This card's second ability works no matter why your opponent causes you to discard it from your hand.
- The second ability doesn't do anything if one of your effects causes you to discard this card from your hand.
- When its second ability takes effect, this unit isn't "deployed"; it's just "put into the Space arena."

Rebel Crew Chief

↻ → Show one of your partially built Starfighter cards to your opponent. Put 1 build counter on it. Play only during your build step.

- This unit lets you put free build counters on one of your partially built Starfighter cards. (These build counters don't cost you any build points.)

Rebel Lieutenant

{P} Capital Ship Pilot. The Capital Ship gets: +10 speed.

+1 power.

As long as this unit is in the Space arena, each of your other Space units gets +10 speed.

- The first part of this unit's Pilot ability gives +10 speed to the Capital Ship it's on. The third part gives +10 speed to each of your other Space units.

Rebel Marine

This unit can't attack if you have no units in the Space arena.

- If you choose not to attack with a unit, or if it can't attack, you still tap it.

Rebel Surrender

Pay 4 Force ⟶ Choose one of your opponent's units in the Ground or Character arena. If your opponent rolled no hits for that unit's last attack, he or she discards the unit. Play only after the unit has attacked and before any other unit attacks.

- If dice were rerolled, use the last roll to see if your opponent rolled any hits.
- No dice are rolled for a unit with 0 power, so your opponent rolls no hits for such a unit.
- You can play this card only if your opponent rolled no hits. If your opponent rolled any hits but the damage was prevented, this card still can't be played.

Starfighter's End

Pay 6 Force ⟶ Choose one of your untapped Starfighters in the Space arena and one of your opponent's units in that arena. For each 10 speed your Starfighter has, it does 1 damage to that unit. Then discard your Starfighter from the Space arena. Play only if no unit is attacking.

- For example, if your Starfighter has 60 speed, it does 6 damage to your opponent's unit.

Stormtrooper Assault Team

Damage from this unit's attack can't be prevented.

- No method of preventing damage works, including Battle cards, Evade, and Deflect.
- Cards and abilities that prevent damage can still be played; they just don't do anything.

Stormtrooper DV-523

This unit gets -2 power as long as it's attacking a unique Character.

- A unique Character is one with a letter in a purple circle on the right-hand side of the text box. Unique Characters have special rules. See the Rulebook for more details.

Vader's TIE Fighter (A)

Pay 2 Force ⟶ Evade 2 *(Prevent up to 2 damage to Vader's TIE Fighter.)*

When Vader's TIE Fighter is discarded from the Space arena, you may pay 2 Force. If you do, return Vader's TIE Fighter, all cards stacked with it, and its Pilot, if any, from your discard pile to your hand.

- If some of the cards have left the discard pile by the time the second ability takes effect, you don't get them back in your hand.

Errata and Rulings: *Battle of Yavin*

Errata

- **Millennium Falcon (C)**: The type line should read: "Space - Independent Transport." (It was printed incorrectly as "Space - Independent Cruiser.")

Rulings

Blow This Thing

Pay 8 Force ⟶ For this attack, roll only 1 of your dice instead of a number of dice equal to the attacking unit's power. If the attacking unit damages the defending unit, the defending unit is discarded. Play only if one of your units is attacking.

- If the 1-die attack results in a hit, that damage may still be prevented. If the damage is prevented, Blow This Thing has no effect.

Celebrate the Victory

Draw 5 cards. You can complete Celebrate the Victory only if your opponent has no units in the Space arena and no Space units in his or her build zone.

- Face-down cards in a build zone aren't units and have no effect on whether or not you can complete Celebrate the Victory.

Chariot Light Assault Vehicle

↻ ⟶ One of your units in the Ground arena gets Accuracy 1 for this attack *(add +1 to each of that unit's attack dice).* Play only when that unit is attacking.

- Chariot Light Assault Vehicle gives one of your other units in the Ground arena Accuracy 1. That unit must already be attacking, so it must have higher speed or some other way to attack before Chariot Light Assault Vehicle would attack.
- Chariot Light Assault Vehicle can't give itself Accuracy 1, since it would already be tapped when it attacks.

Chewbacca (B)

When you draw a card, if Chewbacca is in the Character arena, remove 1 damage counter from one of your Space or Ground units.

Pay 1 Force ⟶ Retaliate 2 *(If a unit in the same arena as Chewbacca is attacking him, he does 2 dice of damage to that unit when the attack ends.)*

- Chewbacca's ability to remove damage counters activates whenever you draw a card, whether that is during your draw step or as an effect that happens at some other time.

Countermeasures

Pay 4 Force ⟶ For this attack, when the attacking unit damages the defending unit, it also does that much damage to itself.

- You must play Countermeasures before dice are rolled for this attack.
- Both units suffer an equal amount of damage after damage prevention. Any damage that is prevented to the defending unit for this attack is also prevented for the attacking unit.

Creature Attack

When the battle phase starts, your opponent chooses one of his or her units in the Character arena. Creature Attack does 5 dice of damage to that unit.

- Creature Attack has no effect if your opponent has no units in the Character arena when the battle phase starts.

Darth Vader (F)

, Pay 4 Force ⟶ Choose one of your opponent's Characters with health 3 or less in the Character arena. Your opponent discards that Character. Play only when Vader would attack.

- Darth Vader's ability affects only a Character whose total health is 3 or less. Stacking a unique Character with printed health 3 or less could make its total health 4 or more, so this ability couldn't affect it.
- Damage counters on your opponent's Characters don't affect this ability. For example, a Character with 5 health who has 2 or more damage counters remains unaffected by this ability.

Death Star (C)

Each Starfighter gets Critical Hit 3 as long as it's attacking the Death Star. ⟶ Each player discards all of his or her units in the Ground arena. Play only if your opponent has no units in the Space arena and only when the Death Star would attack.

- You can't use this ability if your opponent has any units in the Space arena. Space units in your opponent's build zone have no effect on whether or not you can use the Death Star's ability.
- When this ability is activated, all your units and all your opponent's units in the Ground arena (including their Pilots, if any) are discarded. Units in your build zone and your opponent's build zone aren't affected.

Deflectors Activated

Choose an arena. This turn, when any of your units in that arena would be damaged, prevent 1 of that damage.

- Deflectors Activated prevents 1 damage each time a unit in the chosen arena is damaged (each damage instance). For example, if one of your units in the chosen arena suffers 2 damage, Deflectors Activated prevents 1 of that damage, reducing the damage to 1. If the same unit suffers another 4 damage later that turn, Deflectors Activated again prevents 1 of that damage, reducing the damage to 3.
- If a Battle card (such as Unfriendly Fire) or ability (such as the one on Rebel Armored Freerunner) damages more than one of your units at once, Deflectors Activated prevents 1 damage to each of the units.
- If you play 2 Deflectors Activated cards, the effects add up. This means you prevent 2 damage each time any of your units in the chosen arena takes damage.

Escape Pod

As long as this unit is in the Space arena, if one of your Space units with a Pilot on it is discarded, you may move that Pilot to your build zone instead of discarding it. If you do, discard this unit from the Space arena.

- When you use Escape Pod's ability, the Pilot moves to your build zone. This doesn't tap the Pilot.
- You can activate Escape Pod's ability only if the unit the Pilot is on is discarded.

Grand Moff Tarkin (C)

As long as Tarkin is in the Character arena, you can't retreat your units during your retreat step.

- The restriction applies only during your retreat step. It doesn't stop cards or abilities that allow you to retreat during battle.

Han Solo (C)

When the roll for build points is made, if Han is in the Character arena, you get -1 build point this turn.

- You can't receive less than 0 build points during a turn.

Hero's Potential

Pay 4 Force ⟶ Choose one of your stacked unique units. Take any card in that stack and put it on top. When the turn ends, put that card on the bottom of the stack.

- When the turn ends, the card that was on top of the stack before Hero's Potential was played is returned to the top of the stack.

Imperial Landing Craft

When you deploy this unit, choose one of your opponent's Ground units. If that unit is in the Ground arena when the battle phase starts, this unit does 2 damage to it.

- You choose the unit when you deploy Imperial Landing Craft. If that unit is in the Ground arena when the battle phase starts, Imperial Landing Craft does 2 damage to it. If it isn't in the Ground arena (for example, if it has retreated), this ability doesn't activate and Imperial Landing Craft does no damage.

Millennium Falcon (B)

The *Millennium Falcon* can have an extra Pilot. When the battle phase starts, if the *Millennium Falcon* has a Pilot on it, you may remove 1 damage counter from the *Millennium Falcon.*

- You can put 2 Pilots on the *Millennium Falcon.* Both Pilots must follow all the standard rules, including having the "Transport Pilot" ability.
- Remove only 1 damage counter per turn (when the battle phase starts), only if you have 1 or more Pilots on the *Millennium Falcon.* If the *Millennium Falcon,* has no damage counters, this ability has no effect.
- If you have 2 Pilots on the *Millennium Falcon,* you still remove only 1 damage counter from it.

Obi-Wan Kenobi (H)

When Obi-Wan is discarded from the Character arena, you may search your deck. You may take a Luke Skywalker card from your deck and stack it under a Luke Skywalker in the Character arena. *(Follow normal stacking rules.)* Then shuffle your deck.

- You can't have more than 4 cards in a stack. No 2 cards in the stack can be identical--that is, with the same name and version.
- If you don't have a Luke Skywalker in the Character arena, you can't get a Luke Skywalker card from your deck.

Rebel Armored Freerunner

↻ → This unit does 3 damage divided as you choose between 1 or 2 of your opponent's units in the Ground arena. Play only when this unit would attack.

- When the Rebel Armored Freerunner would attack, you can play its ability instead. You can divide the 3 damage in any way between 1 or 2 units. You can do either 3 damage to one unit or 2 damage to one unit and 1 damage to another unit.

R2-D2 (D)

Any Starfighter with R2-D2 on it can have an extra Pilot if that Pilot isn't an Astromech Droid.

{P} Starfighter Pilot. The Starfighter gets:

+10 speed.

Critical Hit 2.

When the battle phase ends, remove 1 damage counter from this Starfighter.

- You can place another Pilot (if it's not an Astromech Droid) on the Starfighter before or after placing R2-D2 on the Starfighter. The other Pilot must follow all the standard rules, including having the "Starfighter Pilot" ability.

Sabers Locked

Pay 1 Force → Choose one of your untapped Characters and one of your opponent's untapped Characters. Each player rolls one of his or her dice. If you roll lower, tap your Character. If your opponent rolls lower, tap his or her Character. If it's a tie, tap both Characters.

- You may choose Characters in any arena or build zone.

Second Wave

You may complete Second Wave only if you have no units in the Space arena and no Space units in your build zone. Put up to 3 Starfighter cards into the Space arena from your discard pile.

- Face-down cards in a build zone aren't units and have no effect on whether or not you can complete Second Wave.
- The Starfighter cards put into the Space arena are now untapped units that can attack this turn and act like any other unit.
- Putting the Starfighter cards into the Space arena doesn't count as having deployed or finished building them. No abilities can trigger on that.

Tatooine Hangar

As long as this unit is in the Ground arena, each of your Space units costs 1 fewer build counter to deploy.

- You can reduce the build cost of a unit to 0. The minimum build cost of a unit is 0. (You can't "gain" build points by using more than one copy of this unit and cheap Space units.)

Trust Your Feelings

Predict the number of hits you'll roll for this attack *(after any rerolls).* If you're correct, you gain +3 Force. Play only before you roll attack dice.

- Your prediction is based on the number of hits you roll, not the amount of damage inflicted. Damage prevention has no effect on Trust Your Feelings.

Untamed Ronto

When this unit attacks, your opponent may pay 2 Force. If your opponent does, he or she chooses a unit *(yours or your opponent's)* in the same arena as the defending unit. This unit now attacks the chosen unit instead.

- Your opponent must decide before you roll the Untamed Ronto's attack dice whether or not to pay the 2 Force.
- Untamed Ronto can attack itself.

Vader's Fury

Pay 6 Force → Choose one of your Starfighters in the Space arena. Each time that Starfighter attacks this turn, when its attack ends, choose a unit in the Space arena that it can attack but hasn't attacked this turn. The Starfighter attacks that unit. Play only when no unit is attacking.

- Vader's Fury must be played before the Starfighter attacks, or it has no effect.
- Vader's Fury allows your Starfighter to attack each of your opponent's units in the Space arena once. Your Starfighter can't use Vader's Fury to attack any individual Space unit more than once.

  Example: *You have Vader's TIE Fighter in the Space arena and your opponent has 3 Y-Wing Gold Two units and a Rebel Blockade Runner. You play Vader's Fury before Vader's TIE Fighter attacks. Then Vader's TIE Fighter attacks each of the 4 units in the order you decide.*

Womp Rat

When you deploy this unit, your opponent chooses and discards 1 card from his or her hand.

- Units have no abilities during the setup of the game. The Womp Rat's ability doesn't activate unless you deploy it during a normal turn of the game.

Errata and Rulings: *Jedi Guardians*

Errata

- Jango Fett (E): Should be Jango Fett (G).
- Tyranus's Geonosis Speeder (B): Should be Tyranus's Geonosian Speeder (B).

Rulings

Dark Dreams

-

If you copy a card that is based on a condition (like Artoo's Repairs), you can't use it unless the condition is met.

Homing Missile

-

No, you may not blow on the card as it falls. If you use card sleeves, you must remove the sleeve before you drop it.

Jedi Council Quorum

-

If the Quorum condition is met and the Dark Side controls 2 arenas, the Light Side wins. This is because "at end of turn" triggered effects resolve before control of the arenas is checked.

Darth Sidious (C)

-
- If you want Sidious (C) to reroll, like with Shoot Her or Something or Jar Jar Binks (A), you don't get to look at the dice beforehand. You must blindly pick which dice he rerolls.

If Sidious (C) attacks the Clone Captain and the Captain wants to prevent some damage, he must place the damage counters before he gets to see how many hits were rolled. Even is Sidious (C) didn't do as much as was placed, the damage counters stay where they were put.

Tyranus's Return

-

Only returns a Character from play, not the discard pile.

Neimoidian Shuttle (A)

-

Yes, it can retreat itself.

Tyranus's Solar Sailer (B)

-

You may only use the Reserves ability if damage is pending.

Forward Command Center

> Q: I have a Jawa Sandcrawler and Forward Command Center in play. When it’s my turn to attack, do I have to tap the Forward Command Center when its speed 20 is checked and thus I can’t use his ability to increase the power of my Jawa Sandcrawler? (Can Forward Command Center use its ability on units that are slower than it is?)
>
> A: You could not use the Forward Command on the Jawa Sandcrawler, because you play it when that unit (the one whose power you want to increase) would attack. Since the Forward Command Center would be tapped before that, it doesn't work.

Errata and Rulings: *The Empire Strikes Back*

Errata

-
- Admiral Firmus Piett (B): Play only if Admiral Firmus Piett is in your hand.
- Self-Destruct: One of your units gets: "Pay 0 Force ⟶ Retaliate X" until end of turn…"

The Armor ability should be read as: "(If rolling dice at this unit, this unit is damaged only on a 5 or more.)". This includes:

-
- *Avenger (A)*
- Blizzard Force Snowtrooper
- *Blizzard One (A)*
- All Terrain Troop Transport
- Anti-Infantry Laser Battery
- Darth Vader (K)
- Major Bren Derlin (A)
- *Millenium Falcon* (D)
- Rebel Trenches
- *Redemption* (A)
- Stormtrooper Sentry
- All Terrain Armored Transport
- All Terrain Scout Transport
- Armor Plating
- Space Slug
- Blizzard Force AT-AT
- Darth Vader (J)
- *Imperial II*-Class Star Destroyer
- Kuat Nebulon-B Frigate
- Snowtrooper Guard

Y-wing Gold Six

Rulings

AT-AT Assault Group

-

May be piloted.

Chewbacca (G)

-

This card brings back droids for 1 build point (one droid per turn).

Dangerous Gamble

-

Card name is written along the top of the card and does not include version letter (A, B, C, etc.), or any other trait of the card.

Dark Cave

-

Counters are removed if the Location is replaced by a Light Side Location. If the Location is replaced after a Character has switched sides, then the Character still goes back at end of the turn (regardless of whether Dark Cave is there or not).

Darth Vader (I)

-

The final word: He can search once. Since his ability doesn't state he can use it multiple times, and the chance he has it is during the turn, that is the one time that he can use it. He can’t use it during the build step.

Emperor's Prize

-
- If a unit is discarded by placing damage counters on it, and the damage counters were at least double the unit’s health, then you may play Emperor’s Prize to bring the unit back into play.

Emperor's Prize considers all damage counters on a unit (not only those that have just been placed) when bringing that unit back into play.

Failed for the Last Time

-

The entire type line of the card must match.

Jedi's Failure

-

If the targeted Jedi is returned to hand or discarded, the opponent does not gain control of that Jedi.

Lando Calrissian (A)

-

If your opponent gains control of Lando, you may stack any copies of Lando on that unit as normal, although that does not change who ultimately controls Lando. If Lando is returned to his owner's hand, then all copies in the stack go to his rightful owner.

Lobot (A)

-

His activated ability may be activated during any chance to play activated abilities as long as its cost can be met.

Millennium Falcon (F)

If one of your Characters would be damaged and discarded from any arena or build zone, you may prevent that damage and retreat that Character instead. If you do, the *Millennium Falcon* doesn't untap during your next untap step.

-

If you have the Cloud City Dining Hall out, your Characters will not retreat, and the *Falcon* will not stay tapped.

> Q: Can I use the *Millennium Falcon* (F)'s ability more than once per turn? If I can, does the "not untapping" clause build up for future turns, or does one turn of not untapping satisfy this?
>
> A: You can use the *Millennium Falcon* (F)'s ability whenever one of your Characters would be damaged and discarded. While the "does not untap" clauses do stack up, one turn of not untapping satisfies them all.
> Q: Suppose I have *Millennium Falcon* (F) and an undamaged Character with 5 health in play. My opponent has played Painful Reckoning. My opponent then attacks that Character and rolls 3 hits. Can I use the *Falcon* to save the Character?
>
> A: The short answer is no.
>
> The medium length answer is that both Painful Reckoning and *Millennium Falcon* (F) are replacement effects, and that the Painful Reckoning happens *after* the *Falcon*.

The long answer is complex, but here goes. The *Falcon* (F)'s ability is a static replacement effect. It happens at the end of the Play or Pass damage prevention step (i.e., everyone is done playing damage prevention effects). It will only kick in if the incoming damage is greater than the unit's remaining health. So in this case, with only 3 incoming damage, the *Falcon*'s effect cannot be invoked. Painful Reckoning is also a replacement effect. However, it replaces the actual placement of damage counters—in this case, replacing the placement of 3 damage counters with the placement of the original 3, plus 3 extra counters, or 6 counters total.

Millennium Falcon (G)

-

You roll one time to try to prevent all damage being done.

Obi Wan's Sprit (A)

-

Obi Wan's Spirit does not count toward controlling the Character arena for either player.

Princess Leia (G)

-

Princess Leia (G)'s ability triggers even when Leia is piloting a Space unit in the Space arena.

Quest for Truth

-

If you pick a Battle card, you discard it after you've played it. Your opponent may not play any of those cards while they are set aside.

Rally the Defenders

-

This card affects only units that have a printed cost of 2 or less.

Sacrifice

-

A unit must actually be placed in the discard pile in order for this card to have an effect. The actual printed cost of the Battle card must be 4 or less.

Streets of Cloud City

-

If this card is in play, you fight in the Space arena once you have completed the Ground arena battle phase. After the Space arena, you then fight in the Character arena.

Yoda (G)

-

Yoda (G) does not count as Yoda while stacked. Yoda (G) cannot leave the stack once stacked. This card's ability is not in effect during setup (as with all cards). If you play it during setup, you spend 3 for a Yoda that can't be stacked on a unit.

Asteroid Field

> Q: How does it work when a card (such as Asteroid Field) causes damage against all units in an arena? Do you roll against each unit and hold all damage (and therefore damage prevention "play or passes") until all units have been rolled against? Or do you roll against each unit separately, dealing with damage on one before moving on to the next; and if so, who decides the order?
>
> A: All of the dice are rolled, and then there is one total "play or pass" damage prevention, not one for each unit. The controller of the card that forced the roll is the one who chooses the order of the units.

Bright Hope (A)

-

You must reveal the card at the end of the game to prove that it was a Ground unit (assuming it was not built during play).

> Q: What happens if you have *Bright Hope* with a Ground card under it, then play Refit on Yavin on the *Bright Hope*?
>
> A: The card stays removed and has no effect afterward.

Darth Vader (G)

> Q: Can Darth Vader (G) tap to disrupt a Battle card even if no Battle card has been played? Can he tap to disrupt your own Battle card?

A: Your Darth Vader (G) can’t disrupt a Battle card that hasn’t been played, but can disrupt one of your own Battle cards.

Lando Calrissian (C)

-

A unit must actually be discarded to the discard pile in order to prevent damage to this unit. Damage must be being dealt to this unit in order for it to activate its prevention ability.

Luke Skywalker (I)

-

If Luke Skywalker (I) is the only card in the stack, then Luke Skywalker (I) may pay 2 Force – Evade 1.

Probot

-

You may discard this card anytime there are damage counters on it. Draw 5 cards. For every damage that was on this unit, you may pick from the cards currently in your hand, and place them on the top of your deck in any order.

Snowtrooper Elite Squad

-

An effect may attempt to discard this unit as a cost, but this unit will instead retreat. The effect requiring the discard cost will not resolve. If this card is designated for discard as the result of a discard effect, it will retreat instead of being discarded.

Surprise Reinforcements

-

This card no longer allows you to act like you’re in a build step. You get to use 5 build counters and place them on cards in your build zone or cards in your hand (that get placed in your build zone), but you do not get to deploy anything. You also do not get to redeploy any retreated units.

Vader's Call

-

You may pay any amount of Force up to X (X = the number of build counters on Vader's Call). Your opponent discards this many cards.

Wampa

-

This unit does not attack itself.

Cloud City Battleground

-

This card allows you to play Battle cards for 2 less Force. It does not change the actual printed cost of the card you played. If a Battle card can be Enhanced, the total cost is reduced if this card is in play.

Cloud City Dining Hall

-

This card lets no Characters retreat. Cards or rules that allow or cause a Character to retreat do not allow the Character to retreat if this card is in play.

Cloud City Landing Platform

> Q: Cloud City Landing Platform says: "When the roll for build points is made, you may reroll it once." I also have a unit with an ability that begins "When the roll for build points is made . . ." Can I then use this ability twice in a single turn by using the Cloud City Landing Platform to reroll the build roll?
>
> A: You only get the effects off the final roll for build points.

Vader's Vengeance

-

This card adds power to the total power of a unit. It does not replace the printed power on the unit.

Explore the Swamps

-

You must tap an untapped Character in order to play this card.

Hope of Another

-
- This card targets all copies of a Character, if that Character is stacked. However, if the Character is discarded from the arena, then the Character can no longer be targeted by effects as if in play, even if the effect states it lasts for the remainder of the game. Likewise, only versions in play are considered to be Jedi.
- Only the versions in play are affected.

If Hope of Another is played on a non-unique Character, only that copy of the non-unique Character gains the subtype.

Jedi Trap

-

Characters can un-retreat during their build step even if this card was played.

Kuat *Lancer*-Class Frigate

-

This unit is a Cruiser.

Imperial II Star Destroyer

-

This unit's activated ability can only be used once per build step.

Tauntaun Mount

-

This unit's activated ability may be activated during any chance to play activated abilities.

Locations

> Q: Two Location cards, Asteroid Field and Hoth Icefields, damage units in the Space and Ground arena respectively. Is the following the correct approach of resolving the damage: Damage is rolled against each unit, and the pending damage on each unit is noted. Once all damage rolls are complete, all the damage is resolved in one damage "play or pass"?

> A: All dice are rolled in the order the controller of the card chooses. Then both sides get damage prevention for ALL cards at once. They aren't resolved separately.

Errata and Rulings: *Rogues and Scoundrels*

Errata

-

Lando Calrissian (F): Treat Lando Calrissian (F)'s second ability as: "⟳ → Put all face-down cards under Lando into *their owner's* hand."

Rulings

Admiral Firmus Piett (C)

Each of your Space units gets "Pay 0 Force → Intercept."

Pay 1 Force → Retreat Piett. Play only when no unit is attacking and only if you have a Dark Jedi in any arena.

> Q: Do your units still get "Pay 0 Force → Intercept" if Admiral Firmus Piett (C) is retreated?
> A: No. From pg. 27 of *The Empire Strikes Back* rulebook: "Static abilities usually work only while their unit is in an arena. They turn off if the unit is retreated."

Big Asteroid

When this unit is discarded from the Space arena, you may search your deck, your hand, and/or your discard pile for up to 2 Medium Asteroid cards and put them into the Space arena. Then shuffle your deck.

Q: If I play Dark Sacrifice on a Big Asteroid, is its bonus granted to the two Medium Asteroids that come out?
A: No. The bonus from Dark Sacrifice is granted before the two Medium Asteroids come out. Likewise, if played on Medium Asteroid, the bonus is granted before the two Small Asteroids come out.

Boba Fett (G)

Upkeep: Pay 1 build point or tap this unit. (Pay Upkeep when your build step starts.) Bounty: 1 build point. (When this unit damages another unit and the other unit is discarded, you gain the bounty when your next build step starts.)

Q: How exactly does Upkeep work?
A: At the start of your build step, you must choose which of Boba Fett (G)'s Upkeep costs you are going to pay. You must pay one of those costs, if you can. For example, if for some reason Boba Fett (G) remained tapped and you could not pay the "tap this unit" cost, then you would have to pay the build point cost, if possible. If you could not pay either cost, then simply ignore the Upkeep and go on with your build step.
Q: When exactly do you earn the bounty?
A: At the start of the next turn's build step. So if both players earned a bounty last turn, the Dark Side player would get his or her bounty first.
Q: Can I try to pay Upkeep before earning the bounty?
A: Yes, since these are both triggered abilities that trigger at the start of your build step, you can chose to deal with the Upkeep ability first, and then deal with the bounty.

Bossk (A)

Bounty: Search your opponent's deck for each card with the same name as the Character that you gained this bounty for. Put those cards in his or her discard pile. Then your opponent shuffles his or her deck. (When this unit damages another unit and the other unit is discarded, you gain the bounty when your next build step starts.)

Q: Would you still earn this bounty even if Bossk is no longer in play?
A: Yes. Once a triggered ability has been generated, it doesn't matter if its source leaves play.

Chewbacca (I)

Retaliate X, where X is Chewbacca's power. If Chewbacca's Retaliate attack causes a unit to be discarded, untap Chewbacca.

> Q: Do cards in Chewbacca's stack count toward his "X"?
> A: Yes.

Dantooine System

Discard this Location from the Space arena → Your tapped Space units can't be attacked this turn.

> Q: When exactly can you play this ability?
> A: Since it does not have a restriction, you can use it at any Play or Pass opportunity.

Dark Sacrifice

Pay 2 Force, Discard one of your units from any arena → Each of your other units in that arena gets +X power until end of turn, where X equals the discarded unit's build cost. Play only when no unit is attacking.

> Q: Does build cost include cards in the stack?
> A: Yes. Build cost would add up the cost, plus 1 for any card in the stack.

Dengar (A)

Upkeep: Put 1 damage counter on Dengar. (Pay Upkeep when your build step starts.)

> Q: What if putting the damage counter on would kill Dengar?
> A: Then Dengar would be killed.
> Q: Can I use damage prevention cards to avoid the Upkeep cost?
> A: No, putting damage counters on a unit is different than receiving combat damage.

Doctor Evazan (A)

↻ → Choose an untapped unit in the Character arena with a total build cost of 4 or less. Doctor Evazan does 4 dice of damage to that unit. Play only when Doctor Evazan would attack.

> Q: What exactly are "dice of damage"?
> A: It means you roll that many dice against that unit.

Q: Isn't this ability the same as attacking? Doctor Evazan (A) can only use it when he would attack, and he already has 4 Power.
A: Not exactly. This ability allows you to deal 4 dice of damage, which—if you choose—can be applied to your own units. This ability might come in handy with Probot, Imperial Misdirection, Han Enchained, or Falcon's Needsin play.

Hound's Tooth (A)

When the Space battle step starts, if *Hound's Tooth* doesn't have a Pilot, *Hound's Tooth*gets the Pilot abilities of one of your Pilots in the Character arena until end of turn.

Q: Since *Hound's Tooth* is a Transport, can it only gain the Pilot abilities of a Transport Pilot?
A: No. *Hound's Tooth* may gain the Pilot abilities of any Pilot in your Character arena.
Q: What if you don't have any characters with the Pilot ability?
A: Then the *Hound's Tooth* doesn't gain anything.

Dune Sea Krayt Dragon

Q: Can you stack this with the Krayt Dragon from *A New Hope*?
A: No, they are different units and not unique.

Lando Calrissian (F)

→ Put the top 2 cards of your deck face down under Lando. (They're not part of his stack.)

→ Put all face-down cards under Lando into your hand.

Q: Can you look at the cards that are face down under Lando?
A: Yes.

Lando's Influence

When any Battle step starts, you gain control of one of your opponent's units in that arena. At the end of battle in that arena, return that unit to your opponent.

Q: Although this says *any* Battle step, can Lando's Influence affect the Space Battle?
A: No, since the "Battle step starts" resolution takes place in the Space arena before any Play or Pass chances—meaning, you are past the trigger step for the

Space Battle and cannot play Lando's Influence to affect Space units. The exception is if Ground and Space combats are somehow reversed through a Location card.

Lobot (B)

Treat Lobot as a Droid.

Q: Does Lobot (B)'s "Treat as a Droid" work with cards like Het Nkik (A) or *A New Hope*'s Tatooine Sandcrawler?
A: Yes, "Treat as a …" means that "Droid" is on the subtype line.

Prince Xizor (A)

Whenever Prince Xizor is attacked, prevent all but 2 of that damage.

Q: What happens when Xizor blocks the Tusken Warrior (who says his damage can't be prevented)?
A: The damage is not prevented, and the Tusken will do his full damage to Xizor.

Princess Leia (I)

As long as Leia is in the Character arena, you don't have to pay the Upkeep costs of your Smugglers.

Q: Why does this say: "As long as Leia is in the Character arena…."? I thought static abilities turn off when a unit isn't in an arena?
A: That is correct, the "As long as…" text is superfluous.

Stinger (A)

Pay 1 Force ⟶ Intercept

When *Stinger* is discarded from the Space arena, if it had a Pilot on it, move that Pilot to the Character arena tapped instead of discarding it.

Q: Why does my *Stinger* say "Pay 1 Force ⟶ Intercept 3"?
A: The "3" is a typo. Just ignore it.

Trash Compactor

When the Character battle step starts, put 1 damage counter on each unit in the Character arena.

> Q: Why does my Trash Compactor have a red border?
> A: The red border is an error, as the border should be purple. It is still a Character Location, not a Battle card.

Yoda (I)

During your build step once, the cards in one of your other unique Character's stacks rearrange you may, without spending any build points.

> Q: Can Yoda (I) rearrange his own stack?
> A: No, as the card states you may rearrange one of your *other* unique Character's stacks.
> Q: What if I use Yoda (I) to rearrange the stack of a character that is piloting a unit?
> A: First of all, this is legal to do. Even though the piloting Character stack is no longer a "unit" (since it is piloting), it is still a Character—so Yoda (I)'s ability can be used against it. If you do use it, and a non-Pilot version of that character is put on top of the stack, then the Pilot falls off whatever it is piloting. The Pilot is then put either into the Character arena or the build zone, your choice.

Big Asteroid

Big Asteroid doesn't count toward controlling the Space arena.

> Q: What does: "doesn't count toward controlling the Space arena," mean exactly?
> A: It means that if your opponent has a single unit in the Space arena, and all you have is an Asteroid, your opponent controls Space. If the only unit in the Space arena is an Asteroid, then no one controls space.

Boba Fett (F)

Patrol Ship Pilot. The Patrol Ship gets:

+20 Speed.

Pay 2 Force → Deflect 1.

Bounty: Look at your opponent's hand and choose one of those cards. Your opponent discards that card.

Q: Can Boba Fett (F)'s Deflect ability be used to collect his bounty?
A: Yes.

C-3PO (G)

⟳ → If C-3PO is untapped, you may tap C-3PO to pay the Upkeep costs of one of your units. (Pay Upkeep when your build step starts.)

Q: How can I tap C-3PO to pay an Upkeep cost if he has to tap to give himself the ability?
A: This card should be worded: "⟳ → Pay the Upkeep costs of one of your units. (Pay Upkeep when your build step starts.)" So essentially you can just tap C-3PO (G) to pay an Upkeep.

Chewbacca (H)

Retaliate X, where X is Chewbacca's power

Q: Isn't "Retaliate" supposed to be an activated ability?
A: Yes, there should be a "Pay 0 Force " in front of his Retaliate.

Darth Vader (M)

As long as Vader is in the Character arena, each of your Bounty Hunters costs 1 fewer build counter to deploy.

Q: Again, why does it say: "As long as…." Isn't that redundant with the rules?
A: Yes, the "As long as…" is superfluous.

Death Star Control Room

Each of your Space units gets Accuracy 1.

Q: Does Accuracy stack? What if one of my units already has Accuracy 1?
A: Accuracy does stack, so that unit would now have Accuracy 2.

Greedo (B)

Accuracy –1

Q: What happens if a card gives Greedo (B) "Accuracy 1"?

A: Accuracy is an ability that stacks. If a card gives Greedo (B) “Accuracy 1”, then combined with his “Accuracy –1” he would effectively have “Accuracy 0” (that is, no affect on his attack roll).

Han Solo (H)

When Han is attacked, predict the number of hits that will be done to Han after damage prevention. If you’re correct, gain 3 Force.

Q: When exactly do I do the predicting?
A: As soon as Han is declared as the target of an attack.
Q: Do Battle cards that target Han count as an attack?
A: No, this ability only triggers when your opponent taps a unit to attack Han.

Ugnaught

, Discard this unit from the Character arena → Return 5 cards from your discard pile to your deck. Then shuffle your deck. Play only during your build step.

Q: Can the Ugnaught return himself to the deck?
A: Yes. When the ability resolves, he will be in the discard pile, and will be a valid target for the ability.
NOTE: As of April 12th, 2004, Ugnaught has been added to the banned and restricted list.

Darth Vader (L)

When Vader attacks, set aside the top 3 cards of your deck face up. You may play any set aside Battle cards as though they were in your hand. At the end of the Character battle step, put the unplayed set aside cards back on top of your deck in any order.

Q: Can you use the set aside cards for anything else? Such as to satisfy the Tusken War Party discard cost?
A: No, the set aside cards can only be used for Darth Vader (L)’s ability.

Falcon's Needs

Choose one of your opponent’s units. That unit gets “Upkeep: Pay 2 build points or tap this unit. (Pay Upkeep when your build step starts.)” until the game ends.

Q: What happens if the unit leaves play, but then somehow comes back, such as through Hatch a Clone or Take the Initiative.
A: Cards lose all effects once they leave play.
Q: What if *Falcon*'s Needs is played on a unique unit that becomes part of a stack?
A: The Upkeep would remain, as *Falcon*'s Needs would be assigned to the entire stack. As a general rule, if you can pay Upkeep, you must pay Upkeep—it cannot be avoided by creating a stack, retreating a unit, or piloting another unit.
Q: Can more than one *Falcon*'s Needs be played on a single unit?
A: Yes. Your opponent would then have to pay separate Upkeep costs for each *Falcon*'s Needs on that unit.
NOTE: As of June 20th, 2004, *Falcon*'s Needs has been added to the banned and restricted list.
Q: Would tapping the unit satisfy all these Upkeep costs at once?
A: No, it would only satisfy the first Upkeep cost. For more than one *Falcon*'s Needs on a unit, your opponent would have to pay separate Upkeep costs; essentially, since a tapped unit cannot be tapped again to pay Upkeep, your opponent would have to pay 2 build points (for a second *Falcon*'s Needs on a unit), 4 build points (for a third), or 6 build points (for a fourth).
NOTE: As of June 20th, 2004, *Falcon*'s Needs has been added to the banned and restricted list.
Q: What if my opponent's unit is tapped, and he or she doesn't have any build points left?
A: Then he or she cannot pay *Falcon*'s Needs' Upkeep, and nothing else happens. Note: this is the only way for your opponent not to pay Upkeep—if he or she cannot pay any of the costs that the Upkeep demands.

Jabba's Death Mark

When the battle phase starts, choose one of your opponent's units in any arena. If that unit is discarded from that arena this turn, you gain 5 extra build points next turn.

Q: When exactly do you gain the build points?
A: Since they are "extra" build points, you gain them when you get your normal build points.

Luke's Vow

Pay 2 Force ⟶ Remove damage counters from a Character until that Character is at 1 health. Play only if that Character would be discarded from the Character arena.

•

Luke's Vow overrides the normal play-or-pass situation, since otherwise it could not effectively be played.

> Q: What exactly does “at 1 health” mean?
> A: It means add up the Character’s total health, including cards in the stack and any other static effects that might be boosting that Character’s health. Then remove damage counters until the number of damage counters on the unit is one less than the total health.

Mos Eisley

When you would draw a card during your draw step, instead name a card type (Space, Ground, Character, Battle, Location, or Mission). Reveal cards from the top of your deck until you reveal a card of that type. Put that card into your hand and the other revealed cards into your discard pile.

> Q: What if you introduce a new card type in the future?
> A: You could search for it with Mos Eisley.

Star Destroyer

> Q: Doesn’t a space unit named “Star Destroyer” already exist?
> A: Yes. This card is a different card from the *Battle of Yavin* Star Destroyer, and does not stack with that card. You can have 4 of each in your tournament decks.

Tusken Warrior

Damage from this unit’s attack can’t be prevented.

> Q: What happens if someone plays Lull in the Fighting while I have Tusken Warrior in play?
> A: Lull in the Fighting says: "Prevent all damage dealt by characters this turn.” Tusken says his damage can’t be prevented. This is covered by general rule #3: If one card says something can happen, and another says it can’t, the “can’t” wins. So, your Tusken could still attack, and his damage would not be prevented.

Errata and Rulings: *The Phantom Menace*

Errata

-
- Aurra Sing (B): Should be Aurra Sing (C).
- Sith Infiltraitor: Should be Sith Infiltrator (B).
- Anakin's Podracer: Should be Anakin's Podracer (A).

Sebulba's Podracer: Should be Sebulba's Podracer (A).

Rulings

Lucky Mechanic

> Q: When exactly do you reroll the dice?
> A: Lucky is a keyword with a static effect. When a player (who owns a card in play with the Lucky effect) has a chance to play dice reroll abilities (for attack dice), that player can choose whether to use this static effect after all triggered reroll effects resolve.
>
> Example: An AT-AT Assault Group piloted by General Maximilian Veers (A) attacks Anakin's Podracer (A). After the attack dice are rolled, the Assault Group's triggered reroll ability (granted by Veers) triggers and resolves, allowing the Dark Side player to reroll the dice. Then the normal "play or pass" chance occurs, when players can play effects that reroll dice. The Dark Side player chooses first. When the Light Side player gets a chance to play or pass, the Light Side player can then use the Lucky ability from Anakin's Podracer to reroll a die.
>
> Other applicable effects or Battle cards (e.g., Shoot Her or Something, Second Effort, Cheat the Game) can also be played during the dice reroll play or pass sequence, either before or after Lucky is played. Lucky is simply one more dice reroll option that can be played. If both players pass in a row, the dice reroll chance ends, and any unused Lucky effects are lost for that attack.
> Q: Does the dice reroll ability for Jar Jar Binks (A) resolve like the Lucky effect on Jar Jar Binks (B)?
> A: No. The Jar Jar (A) dice reroll ability is triggered, and it resolves with triggered effects. That triggered effect occurs before the chance to play dice reroll abilities and Battle cards.

Q: Suppose I have a power 2 unit with Lucky 2. If I roll one hit and one miss, do I need to reroll both dice? Can I just reroll 1?
A: You would have to reroll both dice.
Q: What if a Light Side unit with power 3 and Lucky 3 attacks a Dark Side unit with Lucky 2?
A: Each player has the opportunity to play Lucky effects during the dice reroll play or pass chance. The Dark Side player can use the Lucky 2 effect first, rerolling 2 dice; then the Light Side player can use Lucky 3, rerolling 3 dice.

As an alternative, Dark Side could pass and see what Light Side does. If Light Side plays Lucky 3 and rerolls, then Dark Side could respond with Lucky 2 and reroll two dice. If Light Side passes after Dark Side passes, however, the chance to play reroll effects ends, and neither Lucky effect can be played.

Aurra Sing (C)

Whenever Aurra damages a unit and that unit is discarded, put the top card of your deck face down under Aurra. She gets +10 speed, +1 power, and +1 health for each face down card under her.

Q: Do facedown cards also add to the value of Aurra's build cost?
A: No, since they don't count as part of the "stack."
Q: What happens if Aurra winds up on the Light Side with cards stacked underneath her? Do the cards go with her? If the Light Side player controls Aurra, can the Light Side player use that ability and put cards underneath her?
A: Yes. Face down cards stay with her.
Q: What happens if Aurra is returned to your hand?
A: The face down cards remain set aside (i.e., out of play) until the game ends.
Q: What happens if a different version of Aurra is rotated to the top? Does she still get the bonuses?
A: No, the bonus would no longer apply. However, the face down units would stay with her, and they would apply again if Aurra (C) was put back on top.
Q: Do these bonuses work in the build zone?
A: No.

Boss Nass (A)

Each of your other Gungan units costs 1 less build point to deploy and each gets +1 power.

Q: Does Boss Nass make himself cost less? Does this ability give Boss Nass +1 power?
A: Since this ability refers to "other" Gungan units, Boss Nass doesn't cost less and doesn't get +1 from this ability.

C-9979

When you deploy this unit, you may search your deck for a Trade Federation MTT card, a Trade Federation AAT card, and a Trade Federation STAP card. Show those cards to your opponent and put them into your hand. Then shuffle your deck.

> Q: What happens if you don't have all 3 of the units (MTT, AAT, STAP) needed? If I don't have any MTT left in my deck, can I still search for an ATT and STAP?
> A: Yes.

Darth Maul (F)

Pay 2 Force ⟶ Deploy Maul to the Character arena. Play this ability only if this unit has at least 5 build counters on it. At the end of the Character battle step, retreat Maul.

> Q: Is this Maul a "unit" while he is being built?
> A: No, until he is deployed, he is just a "card." The second sentence should begin with "Play this ability only if Maul has..."

Duel of the Fates

This turn, at the end of each Space battle step, if neither player controls the Space arena, untap all units in the Space arena. There is another Space battle step. Do the same for the Ground and Character arenas.

> Q: What happens if there are no units in an arena?
> A: If both players agree that no one can win that arena this turn, skip that arena.
> Q: What happens if no damage can be dealt in an arena (e.g., someone played Discuss It in Committee or Peace on Naboo)?
> A: If it is clear that no one can win that arena this turn, skip that arena.
> Q: Do I have to untap units that I choose to remain tapped (such as Mynocks)?
> A: Yes. You have to untap all units, unless an effect says the unit "can't" untap (since "can't" beats "can"). In situations where one tapped unit is holding another unit tapped because the first unit is tapped (e.g., Space Slug {RaS}), both units untap.

Fight on All Fronts

Play this card only if you have units in all 3 arenas.

Pay 3 Force ⟶ Choose a unit in each arena. Each of those units gets +2 power and Critical Hit 1 until end of turn.

Enhance: Pay 3 more Force ⟶ Each of those units gets +4 power and Critical Hit 2 until end of turn instead.

> Q: Do Asteroid cards or Spirit cards satisfy this card's requirements?
> A: Yes. While those units don't count toward controlling the arena, they do count toward the requirements to play this card.
> Q: Do I need more than one unit in each arena?
> A: You only need one unit in each arena.

In Disguise

Pay 3 Force, Discard one of your Characters from the Character arena ⟶ You may put a Character card with build cost equal to or less than the discarded Character from your hand into the Character arena. Put damage counters on the new unit equal to the number of damage counters that were on the discarded unit.

> Q: What happens if the new character is unique and I already have that unique character in play?
> A: Play the unit and place damage counters. The new unit is then discarded from play (ESB rulebook, p. 40). The discard is "due to" the duplicate discard rule, NOT "due to" lethal damage (should lethal damage exist when it's discarded). Any events that trigger on placement of damage counters trigger normally. Any events that trigger when the unit is discarded trigger normally, provided all other trigger conditions are met. Static effects based on "Would be damaged" and "Would be damaged and discarded" are ignored.

Jar Jar Binks (B)

Lucky 3 (Each attack, you may reroll 3 of this unit's attack dice or have your opponent reroll 3 attack dice against it.)

> Q: What does "Lucky 3" mean when Jar Jar has 2 power? If I miss twice, and reroll his 2 dice, do I get to reroll one of the dice again?
> A: No. His Lucky 3 is there in case his power is boosted somehow (for instance, when he's in a stack). Also, his Lucky 3 works on incoming attacks.

Jedi Temple

Each Jedi costs 1 less build point to deploy.

A Jedi Character can have more than 4 cards in its stack.

> Q: Does my opponent gain these benefits as well?
> A: Yes.

Q: What happens if I build up a stack with 5 Jedi units, but then this Location is discarded?
A: The stack can remain 5 high, but you can no longer add to it. This Location basically turns off the “a stack can have at most 4 cards in it” rule. When this Location goes away, there is nothing in the rules that states what should happen to a unit with more than 4 cards in its stack, so those cards remain as is.

Negotiate the Peace

Return to your hand any number of Light units in one arena whose total build cost is 7 or less. Choose any number of your opponent’s Dark Side units in the same arena. Return those units to your opponent’s hand if their total build cost is equal to or less than the total build cost of your returned units.

Q: Does the “total build cost” apply to each individual unit, or does it apply to the sum of all the units returned to your hand?
A: The latter. “Total build cost” is the sum of all units returned to your hand.
Q: What about stacked units?
A: The build cost is the cost of the stack, not the cost of individual cards in the stack.

Nute Gunray (A)

Each of your other Trade Federation units costs 1 less build point to deploy and each gets “Pay 0 Force ⟶ Intercept.”

Q: Which Trade Federation units get the “Pay 0 Force” ability? Does this affect all of them in play, or just ones that were deployed for 1 less because of Nute?
A: All of them get both abilities.

Orn Free Taa (A)

, Pay 1 build point ⟶ Choose one of your opponent’s units. Tap that unit. Play only during your build step.

Whenever a unit attacks Orn, prevent all damage that unit would do to Orn this turn unless your opponent taps one of his or her untapped Characters.

Q: Does Orn’s damage prevention ability work all the time, or only if you activated his tapping ability?
A: Treat Orn as though there is a line break after “during your build step.” His ability works all the time.

Podracing Course

At the end of the Ground battle step, if there are more than 2 units in the Ground arena, discard the unit with the lowest speed. If 2 or more units are tied for lowest speed, you choose which unit is discarded.

> Q: Does this effect care about the unit's base speed, or does it count modifiers like Battle cards that may have been played?
> A: It looks at the unit's current speed, and so it includes any "until end of turn" modifiers.
> Q: What happens if Snowtrooper Elite Squad is the unit with the slowest speed while Vader is in Character arena?
> A: The Elite Squad replacement effect would replace the discard; the Squad would retreat and have all damage removed.

Quinlan Vos (A)

At the start of the Character battle step, set aside the top 3 cards of your deck face down. You may look at them at any time and play any Battle card set aside this way as though it's in your hand. Put any cards that remain set aside this way on the bottom of your deck at the end of your Character battle step.

> Q: Can I use those cards to satisfy any other requirements or pay some other cost?
> A: No. "As though it were in your hand" does not mean "in your hand."
> Q: When I put them on the bottom of my deck, what order do I put them in?
> A: Whatever order you choose.

Sando Aqua Monster

Choose a unit in the Ground arena with health 4 or less and set it aside. Play only when this unit would attack. When this unit is discarded from the Ground arena, return units set aside in this way to the Ground arena tapped.

> Q: What happens if the Sando is returned to your hand and not discarded, or if it's discarded from the build zone instead of the Ground arena?
> A: In those situations, the set aside units would remain set aside for the rest of the game.
> Q: What exactly does "set aside" mean?
> A: It means that the unit is removed from the game. Units that are removed from the game can't be targeted, tapped to pay costs, etc. If a unique unit is removed from the game, another copy of that unique card can then be played. If the unique unit returns to play, follow the normal unique rules (ESB rulebook, p. 40).
> Q: What happens to a Pilot on a unit that's been set aside?
> A: It goes with the unit it's piloting. If the unit comes back into play, the Pilot comes back with it.

Sith Infiltrator (B)

Pay 1 Force ➞ Evade 1

When you deploy this unit, you may choose a Ground or Space Location in play. Discard that Location.

> Q: Does the triggered effect trigger if Sith Infiltrator (B) is deployed under Sith Infiltrator (A)?
> A: No, if you are playing into a stack, deployment triggers only work when you deploy to the top of that stack.
> Q: If Sith Infiltrator (A) is on top of a stack and is discarded, and owner pays the 2 Force to return to hand, does Sith Infiltrator (B) also come back to hand?
> A: No. Unless the card says otherwise (like Vader's TIE Fighter (A)), only the top card comes back.

Walking Droid Starfighter

Pay 3 Force ➞ Put this unit into the Space arena. As long as this unit is in the Space arena, treat it as a Space unit. Play only during the Space battle step and only if no unit has attacked.

> Q: Can you deploy this unit directly to the Space arena?
> A: No.
> Q: Can you use this ability while this card is in your hand?
> A: No. Abilities on a card do not work while it is in your hand (unless the card says otherwise, of course). Also remember that activated abilities only work when the unit is in the arena. This unit must be in the Ground arena to activate the ability.
> Q: What does “only if no unit has attacked” mean?
> A: It should read “only if no unit has attacked this turn.”

Captain Panaka (A)

Each of your Naboo units gets Stun 2 and “Pay 0 Force ➞ Retaliate 2.”

> Q: Does Panaka’s ability work on himself?
> A: Since this is a Naboo unit, yes, it does.

Captain Tarpals (A)

Each of your Gungan units gets Accuracy 1.

> Q: Does Tarpals give himself Accuracy 1?
> A: Yes.

Let the Cube Decide

Pay 2 Force ⟶ Choose a unit and roll a die. Until end of turn, that unit gets: 1) +2 power; 2) Accuracy 1; 3) +20 speed; 4) Stun 4; 5) Critical Hit 2. If you roll a 6, that unit gets all 5 effects.

> Q: When can I play this?
> A: During any chance to play activated abilities and Battle cards (Steps (1), (6), or (13), pg. 47, ESB Rulebook).

Rune Haako (A)

⟶ Draw 2 cards, then discard 2 cards from your hand unless you discard a Trade Federation card from your hand.

> Q: What defines a “Trade Federation” card?
> A: It’s a card with the words “Trade Federation” in its subtype line.
> Q: If I want to discard two cards with Rune Haako, and one of them is a Trade Federation card, can I still discard two cards?
> A: Yes.

Vilmarh Grahrk (A)

As long as you have a Light Jedi in the Character arena, Vilmarh gets Lucky 3. *(Each attack, you may reroll 3 of this unit’s attack dice or have your opponent reroll 3 attack dice against it.)*

When the roll for build points is made, roll a die. If that roll is equal to the build roll, lose 1 build point. Otherwise, gain 1 build point.

> Q: What happens if I am playing in a SW:TCG tournament and time is called? Does Vilmarh’s ability work in overtime?
> A: (From Ask Wizards, April 22nd.) If you look at the Floor Rules, you’ll see that once time is called, you continue to play as normal, except that you no longer gain Force, draw cards, or roll for build points at the start of each turn. This also means that you do not gain +1 build for having cards in all three arenas.
>
> However, there are several units that you can still use in your build step to gain build points, such as San Hill (A). Also, while cards that trigger off the build roll—such as Princess Leia (G), Yoda's Hut, and now Vilmarh Grahrk—will still trigger, cards that ask you to reroll or modify the build roll—such as Cloud City Landing Platform—will not work.

A Bigger Fish

Pay 3 Force ⟶ One of your units that is attacking a unit with a lower total build cost gets Accuracy 1 and Overkill for this attack.

> Q: When do I play this?
> A: This card is played during the chance to play activated abilities and Battle cards that occurs after the attacker is tapped and the defender declared (Step (6), pg. 47, ESB Rulebook).
> Q: What if my opponent has a unit intercept the attack after I have played this card?
> A: The attacking unit would still get the bonus.

Blockade {TPM}

Cards can't move from the build zone to any arena this turn. Units can't retreat this turn. Battle cards can't be played this turn.

> Q: Isn't there a card called Blockade already?
> A: Yes. Treat this as a different card, even though it has the same name.
> Q: What does: "Cards can't be moved from the build zone to any arena this turn," mean?
> A: If the card or unit is in the build zone, or moves through the build zone, it cannot be moved to the arena this turn. This applies to unit cards and Location cards. It does not apply to Mission cards. Deployment directly from hand to arena is allowed if the deployment is free.
> Q: Can I deploy units before Blockade is completed?
> A: Yes.

Darth Sidious (D)

Character — Sith Lord

Each of your opponent's activated abilities that cost 0 or more Force costs 2 more Force to play.

> Q: Does Sidious' ability affect activated abilities that don't have a Force cost?
> A: No.
> Q: How does Sidious' ability interact with Nexu?
> A: An activated ability that normally has no Force cost is not affected by Sidious. However, Nexu increases the cost of each activated ability by 1 Force, thereby meeting Sidious' Force cost condition. If an ability did not normally cost Force, having Nexu and Sidious (D) would result in a cost of 3 Force. Thus, Nexu and Sidious (D) work very well together.
> Q: What if Sidious, Nexu, and Obi Wan's Spirit (A) are all in play?
> A: Obi Wan's Spirit cannot reduce a Force cost below 1. If Nexu and Obi Wan's Spirit are both in play, an activated ability that normally costs no Force would cost 1

Force. If Sidious is also in play, this cost would increase to 3 Force, less 1 for Obi Wan's Spirit, leaving a net cost of 2 Force.
Q: Is this Sidious a Jedi?
A: Nope, not this one.

Podrace

At the end of the Ground battle step, the player who controls the Ground unit with the highest speed gains 4 Force and draws 2 cards.

Q: Does this include temporary bonuses that come from Battle cards or other effects?
A: Yes, those bonuses should be included.

Errata and Rulings: *Return of the Jedi*

Rulings

Hidden Cost

Q: What does "At any time" mean?
A: "At any time" means any time you can play an ability. There are some times when you can only play certain kinds of abilities, such as damage-prevention abilities, die reroll abilities, and disrupt abilities. Abilities that can be played "at any time" cannot be played at those times.
Q: So I could use Hidden Cost during my build step, if I wanted to?
A: Yes.
Q: What if I have over-built the unit? Do I gain Force for using Hidden Cost?
A: No. If a card has a number of build counters equal to or greater than its build cost, you pay 0 Force to deploy it.
Q: What if all of the units in an arena are tapped? Is there a chance to deploy a unit with Hidden Cost to that arena after the last unit is done, but before we move on to the next arena?
A: Yes. There is a PoP chance before moving on to the next arena.
Q: Is Hidden Cost subject to Darth Sidious (D)'s ability?
A: No. Sidious (D) affects activated abilities. Hidden Cost is not an activated ability; it's a static ability.

Q: What if you're deploying a card with Hidden Cost to a stack?
A: Follow the normal stacking rules. If you are deploying to the bottom of the stack, the cost is 1. If you are deploying to the top, and the new unit is cheaper than the old, the cost is 1. If you are deploying to the top, and the new unit is more expensive, the cost is the difference +1.

Anakin's Spirit (A)

When your build step starts, if you have Luke Skywalker or Leia Organa in the Character arena, gain 2 Force.

Q: Does "Princess Leia" count as Leia Organa?
A: Yes.

Bargain With Jabba

Draw 6 cards. Set aside the cards in your hand face up. Choose one of those cards and put it into your hand. Then your opponent chooses one of those cards and puts it into your discard pile. Repeat until no cards remain set aside.

Q: What if you have less than 6 cards left in your deck?
A: Draw as many as you can.
Q: What if I have set cards aside for some other effect? Does this card fetch them into the auction?
A: No. You only auction off the cards that are in your hand.

Bib Fortuna (A)

Pay 0 Force ⟶ Choose one of your Neutral units in any arena. Put that unit face down under Bib Fortuna. He gets +20 speed, +2 power, and +2 health for each facedown card under him.

Q: What happens to facedown cards under Bib Fortuna (A) when he's discarded from play?
A: They remain "out of the game."
Q: What if I use Lando's Influence to steal one of my opponent's units, and then use Bib Fortuna (A)'s ability? Does that unit go back to my opponent?
A: No. Once the unit has been placed under Bib Fortuna (A), it is effectively "out of the game," so it's no longer affected by Lando's Influence.

Emperor Palpatine

Q: Do Emperor Palpatine and Darth Sidious stack?
A: Yes, for now. (This is subject to change once *Revenge of the Sith* is released.)
Q: Does that mean that Emperor Palpatine and Chancellor Palpatine contest?
A: Yes.

Q: Emperor Palpatine (D) has an effect that triggers if "Palpatine" is discarded from play. Does it trigger if Chancellor Palpatine leaves play?
A: No, it only triggers if Emperor Palpatine (D) is discarded from play.

Emperor Palpatine (E)

Pay 2 Force, pay 1 build point, and ↻ → Put a corruption counter on a unit in any arena. Play only during your build step... If all of your opponent's deployed units have corruption counters on them, they win the game.

Q: When does the win condition occur for Emperor Palpatine (E)'s special ability?
A: For resolution timing purposes, treat the win condition as a triggered effect that triggers when the win condition is met.
Q: What happens if a Pilot with a corruption counter is piloting when Emperor Palpatine (E) is discarded from play?
A: The corruption counter would remain on a Pilot if the Pilot is piloting.

Endor Shield Generator

As long as this card remains tapped, the chosen Space unit gets Shields 4.

Q: Does this add Shields 4? In other words, what if I play this ability on a unit that already has Shields 2?
A: Since Shields stack, that unit would then have Shields 6.

Mon (A)

Whenever Ephant Mon attacks, you may search your opponent's deck and hand for one Battle or Mission card and put it into his or her discard pile. Then your opponent shuffles his or her deck.

Q: Can I get a Battle *and* a Mission card with Ephant Mon (A)?
A: No. You can get one or the other.

Free Tatooine

You may deploy this Location to any arena.

Q: Can I have a Free Tatooine in Space and another in the Ground arena at the same time?
A: Yes.

Han Solo (K)

Each of your other Rebel Ground units and Rebel Characters gets Lucky 2

Q: Does Han Solo (K) grant himself an extra Lucky 2, since he himself is a Rebel?
A: No, the *other* refers to both Ground units and Characters.

Jabba's Dancers

Whenever this unit attacks, gain 1 Force.

Q: Does “gain 1 Force” trigger a second time if Jabba’s Dancers’ attack is intercepted?
A: No. The effect does not trigger on intercept.

Max Rebo Band (A)

Each of your opponent's units in the Character arena can't attack unless he or she pays 1 Force.

Q: When is Force paid in the Max Rebo Band (A) effect?
A: Your opponent must pay Force just prior to tapping and attacking with his or her unit.

Mon Mothma (A)

Your opponent can't attack Mon Mothma unless he or she pays 2 Force.

Q: What happens if Mon Mothma (A) Intercepts an attack (such as when Jabba the Hutt (C) is in play) and the Dark Side player refuses to pay the Force to attack Mon Mothma (A)?
A: If the Dark Side does not pay the Force, the Intercept does not take place, and the defender is the same as it was before the Intercept attempt.

Nien Nunb (A)

Starfighter and Transport Pilot. If Nien Nunb is the extra pilot on the Starfighter or Transport, it gets...

Q: What does "extra pilot" mean?
A: As long as Nien Nunb is piloting a unit with at least one other pilot, he’s considered an extra pilot. It doesn’t matter if Nien Nunb was moved to the unit before or after any other pilots.
Q: How do I know if Nien Numb is the “extra” pilot?
A: If there are two pilots on a starfighter or transport, and one of them is Nien Numb, then Nien Numb’s effect applies.
Q: Does the *Hound’s Tooth* still get Nien’s abilities?
A: Yes.

Salacious B. Crumb (A)

⟶ Choose one of your opponent's units and one of your units in the same arena. This turn, your opponent's chosen unit gets -2 power and must attack your chosen unit.

> Q: When exactly do I play this?
> A: Since the ability does not have a restriction, you can play it during any PoP.
> Q: What if I play this ability and I somehow retreat a unit that must be attacked?
> A: Your opponent's unit could then choose any unit to attack.
> Q: What if I play this in the middle of an attack? Can I make my opponent choose a new unit to attack?
> A: No. If you play it in the middle of an attack, the chosen unit still gets -2 power, but it does not choose a new target for its attack. If that unit was somehow untapped and got to attack again, it would then have to attack the chosen target.

Sarlacc (A)

You may choose not to untap this unit during your untap step. ⟶ Choose one of your opponent's Characters. Play only when this unit would attack. As long as this card remains tapped, the chosen Character doesn't untap. At the start of the Character battle, put 2 damage counters on that unit.

> Q: What if the targeted unit somehow untaps? Does it escape from the Sarlacc?
> A: No. Once the Sarlaac becomes tapped, the targeted unit takes 2 damage at the start of each Character battle as long as Sarclacc remains tapped.
> Q: What if I somehow untap the Sarlacc? Can it then tap down 2 units?
> A: No. As soon as the Sarlacc untaps (whether from your normal untap step or from some other card), its effect ends.

Ewok Village

Whenever one of your Ground units would be damaged by your opponent, prevent all of that damage unless your opponent pays 1 Force.

> Q: What does “damaged by your opponent” mean in the Ewok Village Location effect?
> A: This refers to damage from any unit controlled by your opponent, from any ability or effect played by your opponent, or from any card (e.g., Mission or Location) played by your opponent. It does not apply to the placement of damage counters.

Jabba the Hut

> Q: What happened to Jabba the Hutt (B)?
> A: He will be joining us at a later date.

Wookiee Hug

Pay 3 Force ⟶ Choose a Character. Prevent up to 2 damage to that unit. That unit gets: "Pay 0 Force ⟶ Retaliate 3" until end of turn.

> Q: When exactly can I play this?
> A: Since this is a damage prevention card, it can only be played during the damage prevention PoP.
> Q: But isn't that after you activate Retaliate?
> A: Yes, but since the card grants Retaliate for the rest of the turn, you can Retaliate against any *future* attacks on that unit during that turn.

Close Quarters

Pay 3 Force ⟶ Choose either the Ground or Character arena. As long as there are at least 4 units in that arena, each of your units in that arena gets +4 power and Overkill until end of turn.

> Q: How exactly does this work?
> A: This card checks to see if you have four units in the arena when it is played. If you do, then those units get +2 power and Overkill for the rest of the turn. Those units don’t lose those bonuses if there are fewer than 4 units in the arena later in the turn. Any units that come into play after you play Close Quarters do not get the bonus.
> Q: What if I have a Hidden unit that I deploy later?
> A: It misses out on the bonus. Only units that are deployed when this card is played gain the bonus.

Darth Vader (O)

> Q: What does "Armor 1" mean?
> A: That’s a typo. It just has Armor.

Elite Royal Guard

Treat as a Dark Jedi.

> Q: How does "Treat as Dark Jedi" work exactly?
> A: Essentially, it means that this card has "Dark Jedi" in its subtype line. This text is always active, even while the card is in your hand or in the discard pile.

Emperor Palpatine (C)

Pay X Force ⟶ Choose a unit in the Character arena. Emperor Palpatine does X dice of damage to that unit. This damage can only be prevented by a Jedi Master. Play only when Palpatine would attack.

> Q: Can Yoda (E) use his Reserves ability to prevent damage done to another Character by Emperor Palpatine (C)'s special ability?
> A: Yes.

Fly Casual

Pay 2 Force ⟶ Choose a unit in the Space or Ground arena. That unit gets -20 speed and Lucky 2 until end of turn. Play only before any unit in the Space arena would attack.

> Q: Can units have negative speed?
> A: A unit with negative speed is considered to have speed 0 for all purposes except calculating speed value. When a unit with a negative speed value gets a speed bonus, apply all bonuses and penalties to determine the unit's speed.

Lightsaber Throw

Pay 2 Force ⟶ Choose a Character. Lightsaber Throw does 3 damage to that unit.

Enhance: Pay 4 more Force and tap an untapped Character you control ⟶ Lightsaber Throw does 6 damage to that unit instead. You may discard any Location in the Character arena.

> Q: If I pay the Enhance cost, can I discard one of my own Locations?
> A: Yes, if you want to do that.

Surprising Strength

Pay 2 Force ⟶ Choose a unit. That unit gets +4 power for this attack. Play only on a unit with power 4 or less.

> Q: Can I play this on, say, an A-wing, if Admiral Ackbar (A) is in play?
> A: No. This card looks at the unit's current power, which includes all bonuses.

Errata and Rulings: *Revenge of the Sith*

Errata

- Spinning Slash: The card should read: "Each time that Jedi attacks this turn, when its attack ends, choose a unit in the Character arena it can attack that it hasn't attacked this turn." (The original wording is: "Each time that Jedi attacks this turn, when its attack ends, choose a unit in the Character arena it can attack but hasn't attacked this turn." This wording is changed because Spinning Slash as originally worded allows the attacking unit to repeatedly attack each unit that hasn't attacked yet. It guaranteed that the attacking unit got to roll as many dice as it needed to discard the defending unit (unless it was discarded or reduced to 0 power during its attack). It also allowed the attacking unit to do that to each unit that hadn't attacked yet. There was also the potential for an endless loop if the attacker was reduced to 0 power.

Rulings

Hardcell-Class Transport

At the end of the Space battle step, discard 1 card.

> Q: Does Hardcell-Class Transport's ability make me discard a card if it's in my build zone?
> A: No. A unit's abilities don't work in the build zone. There are some exceptions to this rule, but none apply in the case of this card.

Recusant-Class Light Destroyer

When you finish building this unit, choose Ground, Space, or Character. You may search your deck for 2 cards of the chosen type, show them to your opponent, and put them into your hand. Then shuffle your deck.

> Q: What happens if, when I finish building this unit, I only find 1 card of the chosen type in my deck?
> A: If you only have 1 card of the chosen type in your deck, you can still use this card's ability to put it into your hand. If you have 2 or more, you must put 2 cards of the chosen type into your hand; you can't choose to put just 1 because the ability doesn't give you the choice of "up to 2 cards."

Bail Organa (B)

Pay 2 build points, ⟶ Tap one of your opponent's units. Play only during your build step

Q: Can I tap a unit in my opponent's build zone?
A: Yes.

Buzz Droid

You may choose not to untap this unit during your untap step. When the Space battle step starts, if this unit is tapped, put a damage counter on the last unit it attacked.

Q: If Buzz Droid attacks a unit and another unit Intercepts the attack, which unit did it attack last?
A: Whichever unit the Buzz Droid rolled attack dice against last is the last unit it attacked.

Combined Squadron Tactics

Pay 4 Force ⟶ Choose three of your Space units with different speeds. Each of those units gets +3 power this turn. Play only if you control three Space units with different speeds.

Q: If two units have the same printed speed but one has a higher total speed (from bonuses such as Pilots and Battle cards), can they both get the +3 bonus?
A: Yes. As long as you have three Space units with different speeds when you play Combined Squadron Tactics, those three units will get +3 power.

Q: If two units were different speeds when this card was played but later in the turn become the same speed, do they lose the +3 power bonus.
A: No. The Battle card only checks their speeds when you play it.

Commerce Guild Starship (ROTS)

Put 1 damage counter on this unit ⟶ Gain 1 build point. Play only during your build step.

Q: How often can I use this ability to gain 1 build point?
A: Once per turn.

Coruscant Shuttle

When you deploy this unit, you may search your deck for a Jedi card, show it to your opponent, and put it into your hand. Then shuffle your deck.

Q: What counts as a Jedi card?
A: Any card with Jedi on its type line. Cards with Jedi in their title do not count (unless they also have Jedi in their type line).

Darth Sidious (F)

Discard one of your units from any arena → Gain any combination of build points or Force equal to half of that unit's build cost (round down). Play only during your build step.

> Q: How often can I use this ability to gain Force and/or build points?
> A: Once per turn.

Darth Sidious (G)

Each of your opponent's activated abilities that cost 0 or more Force costs 1 additional Force to play.

Pay 4 Force, discard one of your units from any arena → Gain control of one of your opponent's units in the same arena with equal or less build cost until end of battle. Play only during your build step.

> Q: If an ability doesn't require you to pay any Force, does it cost 0 Force?
> A: No. Only abilities with "Pay X Force" in their costs cost 0 or more Force. X can be 0, but abilities without "Pay X Force" in their costs are not affected by this ability.

> Q: Can I discard one of my opponent's units that I control?
> A: Yes. While you control one of your opponent's units, it's considered "your" unit while in play.

Darth Vader (R)

Damage from Vader cannot be prevented.

> Q: If Vader uses Deflect to damage a unit, can that damage be prevented?
> A: No. Any damage dealt by Vader cannot be prevented. If an effect somehow caused Vader to damage himself, even that damage couldn't be prevented.

Dismiss

Pay 4 Force, discard a card from your hand → Disrupt a Battle card or activated ability. (That card or ability has no effect.)

> Q: If Dismiss disrupts an ability, can that ability be played again?
> A: That depends. If the ability can be played any number of times, then it can be played again. If the ability is limited to once per turn, once per attack, or once per some other duration, then it cannot be played again until the next opportunity to do so arises. For example, if the ability "Pay 1 Force → Evade 1" is disrupted during a chance to prevent damage, it can't be used again until the next chance to prevent damage.

Homing Missiles Salvo

Do 6 dice of damage to any Space unit.

> Q: How many Space units can this card do 6 dice of damage to?
> A: Homing Missiles Salvo does 6 dice of damage to one Space unit of your choice. It can choose a Space unit in any arena or build zone, including a Space unit you control.

It Just Might Work

Choose a Space unit, a Ground unit, and a Character unit you control. At the end of the turn, if each of those units is in the arena it started in, you gain 8 Force.

> Q: Can I choose a Pilot on another unit as the Character unit for this card?
> A: No. When you complete this Mission, you must choose a Character unit. Pilots are not units while on another unit, so you can't choose a Pilot on a unit. If you have a Character with the Pilot ability in the Character arena at the start of the turn, choose that Character, move the Character to a unit, and the Character returns to the Character arena before the end of the turn and is still there at the end of the turn, then you can gain 8 Force (assuming your other two units remain also).

Lightsaber Quick Draw

Choose a Character arena or Ground arena where you have a Jedi. Reveal a unit card from your hand. Lightsaber Quick Draw deals 4 dice of damage to each of your opponent's units in that arena with a speed less than the speed of the unit card you revealed.

> Q: If I have Padmé Amidala (A) in play, do I add +10 speed to the revealed Jedi's speed?
> A: No. Padmé's ability only affects Jedi units in play.

Mace Windu (F)

Pay 2 Force, reveal the top card of your deck → Mace gets +X power for this attack, where X equals the build cost of the revealed card. If it is a Battle card, you may play it during the current play or pass sequence as if it were in your hand; otherwise, put it in your discard pile.

> Q: Do I still have to pay the cost of a Battle card revealed this way if I want to play it?
> A: Yes.

Mas Amedda (A)

Put a damage counter on one of your units ⟶ Gain 1 build point. Play only during your build step.

> Q: How often can I use this ability to gain 1 build point?
> A: Once per turn.

Nos Monster

This unit gets +30 speed as long as there is an Aquatic Location in play.

> Q: Does this unit get +30 speed if there's an Aquatic Location in the Ground or Space arena?
> A: Yes. As long as there's an Aquatic Location in any arena, this card gets +30 speed.

Palpatine's Sanctum

Whenever Vader damages one of your opponent's Jedi and that unit is discarded, put two mastery counters on Palpatine's Sanctum. Vader gets +1 power and +1 health for each mastery counter on Palpatine's Sanctum.

> Q: Does Anakin Skywalker cause this card to gain counters and get power and health bonuses from this card?
> A: No. Anakin Skywalker and Darth Vader have the same name for uniqueness and stacking purposes only. Other abilities treat them as two different units.

Rage of Victory

Choose an arena. Whenever one of your opponent's units in that arena is discarded this turn, each of your units in that arena gets an additional +4 power until end of battle.

> Q: If a unit with Hidden Cost deploys to an arena after this card is played choosing that arena, will it get +4 power if an opponent's unit is discarded from that arena this turn?
> A: Yes. The ability affects the arena, not the units in the arena. Each time an opponent's unit is discarded from the chosen arena, all of your units currently in that arena get +4 power. If the Hidden Cost unit was deployed after an opponent's unit was destroyed, it would not get a +4 power, because it wasn't in the arena when that bonus was gained.

Republic Fighter Wing

This unit gets +1 power for each other unit you have in the Space arena.

> Q: Do Pilots on Space units give this unit +1 power?

A: No. Pilots on units are not considered units or Characters while on other units.

Sacrifice the Expendable

Discard one of your Ground units. If you do, discard one of your opponent's Ground units with build cost 5 or less.

Q: Can I discard one of my opponent's units that I control?
A: Yes. While you control one of your opponent's units, it's considered "your" unit while in play.

Q: If a unique Ground unit has a printed cost of 5 and has another version stacked under it, can this card discard that unique unit?
A: No. A unit's build cost is always it's total build cost -- it's printed build cost plus 1 for each card stacked under it.

Separatist Fleet

Remove 2 Trade Federation, Commerce Guild, Techno Union, Banking Clan, or Separatist cards in your discard pile from the game → Remove 1 damage counter from this unit. (You don't need to choose two cards with the same subtype to use this ability.)

Q: Can I use this ability to remove more than 1 damage counter from this unit each turn.
A: No. You can only use this ability once per turn.

Stubborn Personality

Stacks can't be rearranged this turn. Neither player can stack cards from his or her hand or from the build zone onto unique units this turn.

Q: Can Battle or Mission cards that add cards to stacks do so after this card's played?
A: Yes. As long as the new card doesn't come from your hand or your build zone (such as Yoda's Training).

Q: Can I use Hero's Potential to put a different card on top of a stack if this Mission has been played this turn?
A: No.

Unity of the Jedi

Pay 3 Force → Play only if you have three Jedi with different names in the Character arena. Each of those Jedi gets +2 power and Accuracy 1 this turn. (Add +1 to each of this unit's attack dice.)

> Q: If I have Darth Vader, Anakin Skywalker, and one other Jedi, can I play this card?
> A: Yes. Anakin Skywalker and Darth Vader have the same name for uniqueness and stacking purposes only. Other abilities treat them as two different units.
>
> Q: If I play this card and one of those Jedi is discarded, do the other two lose their bonuses?
> A: No. Three Jedi are required only to play the card. Once you choose to play the card, that requirement no longer matters. Even if one of those Jedi is discarded during the chance to disrupt Unity of the Jedi, the other two will still get +2 power and Accuracy 1.

Yoda (K)

When discarded from play Yoda is, 4 Force gain, and into your hand Yoda put.

> Q: When Yoda (K) returns to your hand due to gaining damage counters equal to his health, can your opponent collect a Bounty on him?
> A: Yes. Yoda still goes to the discard pile when he's discarded from any arena. Then, he returns to your hand.
